Intrinsically safe solenoid directional valves
on-off spool type, direct - ATEX or IECEx

**DHW**
On-off, spool type, directional valves equipped with intrinsically safe solenoids certified for safe operation in hazardous environment with potentially explosive atmosphere.

Certifications:
- **ATEX or IECEx**: II 1G Ex ia IIC, IIB, IIA surface plants zone 0, 1 and 2
- **ATEX or IECEx**: IM2 Ex ia IMb, Ex ib IMb surface, tunnels or mining plants

DHW are **SIL** compliance with IEC 61508

See section [7] for certification data

The valves must be electrically powered through specific “safety barriers” limiting the max current to the solenoid, see section [9]

**Size**: 
Max flow: up to 25 l/min
Max pressure: 350 bar

---

**1 MODEL CODE**

Intrinsically safe valve, spool type, direct

Certification type:
- * = Omit for ATEX Group II
- M = ATEX Group I (mining)
- IE = IECEx Group II
- IEM = IECEx Group I (mining)

Valve size (ISO 4401):
0 = size 06

**Configuration**, see section [2]:

Spool type, see section [5]:

(1) Not for certification M and IEM, Group I (mining)
(2) Possible combined options: all combinations are available

⚠️ The pressure at T port makes difficult the manual override operation that can be possible only if its value is lower than 50 bar

---

**2 CONFIGURATION and SPOOLS** (representation according to ISO 1219-1)

**DHW-0611/WP/6**

1. Valve body
2. Valve spool
3. Intrinsically safe solenoid
4. Electrical connector
5. Manual override

**Seals material**, see section [7]:
- = NBR
PE = FKM
BT = HNBR (1)

**Connector type**
6 = DIN 43650 (standard)

**Options (2):**
- A = solenoid at side of port B
- WP = prolonged manual override

---

**Note:** Spool type 3H is available only for configuration 71. It is similar to spool type 3 but with higher flow capability A-B → T in central position, see section [10]
### 3 Assembly position / location
- Horizontal position only

### 4 Seals and hydraulic fluids
- For other fluids not included in below table, consult our technical office

#### Seals
- NBR seals (standard) = -20°C ÷ +60°C, with HFC hydraulic fluids = -20°C ÷ +50°C
- FKMs (/PE option) = -20°C ÷ +80°C
- HNBR seals (/BT option) = -40°C ÷ +60°C, with HFC hydraulic fluids = -40°C ÷ +50°C

#### Recommended viscosity
- 15÷100 mm²/s - max allowed range 2.8 ÷ 500 mm²/s

#### Max fluid contamination level
- ISO 4406 class 20/18/15   NAS 1638 class 9, see also filter section at www.atos.com or KTF catalog

#### Hydraulic fluid
- Suitable seals type
- Classification
- Ref. Standard
- Mineral oils
  - NBR, FKM, HNBR
  - HL, HLP, HLPD, HVLP, HVLPD
  - DIN 51524
- Flame resistant without water
  - FKM
  - HFDU, HFDR
  - ISO 12922
- Flame resistant with water
  - NBR, HNBR
  - HFC

### 5 General characteristics
- The ignition temperature of the hydraulic fluid must be 50°C higher than the max solenoid surface temperature

#### Performance limitations in case of flame resistant fluids with water:
- max operating pressure = 210 bar
- max fluid temperature = 50°C

### 6 Certification data

#### Valve type
- DHW
- DHW/IE
- DHW/M
- DHW/IEM

#### Certification
- ATEX (Group II)
- IECEx (Group II)
- ATEX (mining) (Group I)
- IECEx (mining) (Group I)

#### Solenoid code
- OW-18/6
- OWI-18/6
- OWM-18/6
- OWM-18/6

#### Type examination certificate
- CESI 02
- ATEX 013
- CES. 12.0017
- CESI 02
- ATEX 013
- CES. 12.0017

#### Method of protection
- Ex II 1G
- Ex ia
- Ex I M2
- Ex ia I Mb
- Ex ib I Mb

#### Electrical characteristics (max values)

10  **QAp DIAGRAMS** based on mineral oil ISO VG 46 at 50°C

11  **OPERATING LIMITS** based on mineral oil ISO VG 46 at 50°C

The diagrams refer to warm solenoids and power supply provided by the Atos barrier type **Y-BXNE-412**.

For DHW valves the curves refer to application with symmetrical flow through the valve (i.e. P→A and B→T).

In case of asymmetric flow the operating limits must be reduced.

12  **INTERNAL LEAKAGES**

DHW internal leakages based on mineral oil ISO VG 46 at 50°C

- 18 cm³/min with P=100 bar - fluid viscosity = 43 cSt at 40 °C
- 30 cm³/min with P=140 bar - fluid viscosity = 22 cSt at 45 °C

13  **INTRINSICALLY SAFE BARRIERS** - see tech. table GX010

Intrinsically safe valves must be powered through safety barriers certified according to Ex-ie protection mode, limiting the energy to the solenoid.

To select the proper intrinsically safe barriers following data must be considered:
1) Vmax and Imax of the solenoid as specified in section must not be exceeded also in fault conditions;
2) the resistance of the solenoid is 150 Ω and the current supplied by the barrier, in normal operation condition, must be over the min. limit (65 mA) to ensure the valve correct operation (over 70 mA for max performances).

The barriers type **Y-BXNE 412** are galvanically isolated electronic devices, complying with European Norms EN60079-0/06, EN60079-11/07 and ATEX certified according to protection mode Ex ia IIC.

These barriers ensure the optimized functioning of the Atos valves up to the max operating limits specified in section 4.

The barriers Y-BXNE-412 are double channel type, suitable to operate valves with double or single solenoid. Two single solenoid valves can be connected to the barrier (one to each channel) but they cannot be contemporary operated.
