

Ex-proof servoproportional directional valves sleeve execution

direct, with LVDT transducer and zero spool overlap - ATEX, IECEx, EAC, PESO, CCC or cULus

DLHZA-T, DLKZA-T

Ex-proof servoproportional directional valves, direct, sleeve execution, with LVDT position transducer and zero spool overlap for best performances in any position closed loop control.

They are equipped with ex-proof proportional solenoids and LVDT transducer certified for safe operations in hazardous environments with potentially explosive atmosphere.

Certifications:

- Multicertification ATEX, IECEx, EAC, PESO, CCC for gas group II 2G and dust category II 2D
- Multicertification ATEX, IECEx for gas group I M2 (mining)
- cULus North American certification for gas group C&D

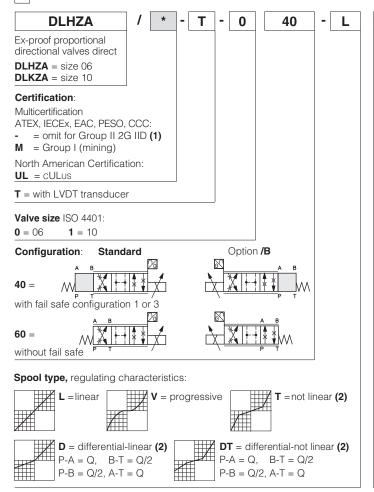

The flameproof enclosure of solenoid and transducer, prevents the propagation of accidental internal sparks or fire to the external environment.

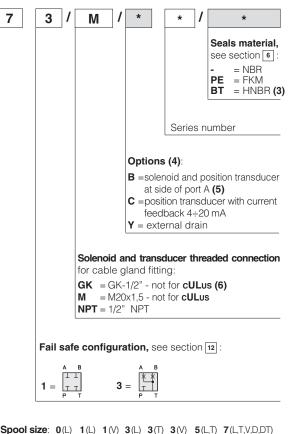

The solenoids are also designed to limit the surface temperature within the classified limits.

9 CABLE SPECIFICATION AND TEMPERATURE - Power supply and grounding cables have to comply with following characteristics:

Multicertification Group I and Group II

Power supply: section of coil connection wires = 2,5 mm²

Grounding: section of internal ground wire = 2,5 mm² section of external ground wire = 4 mm²

cULus certification:

- Suitable for use in Class I Division 1, Gas Groups C
- Armored Marine Shipboard Cable which meets UL 1309
- Tinned Stranded Copper Conductors
- · Bronze braided armor
- · Overall impervious sheath over the armor

Any Listed (UBVZ/ UBVZ7) Marine Shipboard Cable rated 300 V min, 15A min. 3C 2,5 mm² (14 AWG) having a suitable service temperature range of at least -25°C to +110°C ("/BT" Models require a temperature range from -40°C to +110°C)

Note 1: For Class I wiring the 3C 1,5 mm² AWG 16 cable size is admitted only if a fuse lower than 10 A is connected to the load side of the solenoid wiring.

9.1 Cable temperature

The cable must be suitable for the working temperature as specified in the "safety instructions" delivered with the first supply of the products.

10 CABLE GLANDS - only Multicertification

Cable glands with threaded connections GK-1/2", 1/2"NPT or M20x1,5 for standard or armoured cables have to be ordered separately, see tech. table **KX800**

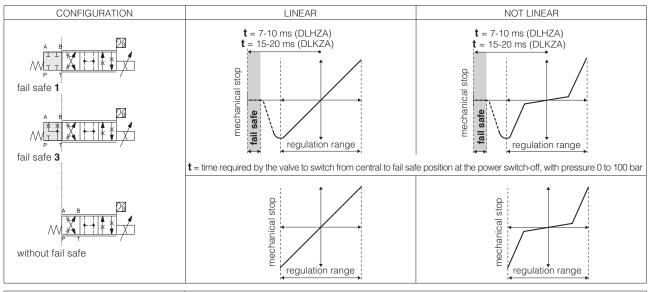

Note: a Loctite sealant type 545, should be used on the cable gland entry threads

11 OPTIONS

- **B** = Solenoid and position transducer at side of port A of the main stage
- C = Position transducer with current feedback 4÷20 mA, suggested in case of long distance between the electronic driver and the proportional valve
- Y = External drain, to be selected if the pressure at T port is higher than the max allowed limits

13 DIAGRAMS - based on mineral oil ISO VG 46 at 50°C

13.1 Regulation diagrams

1 = Linear spools L

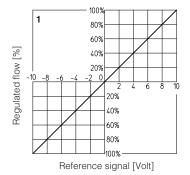

2 = Differential - linear spool D7

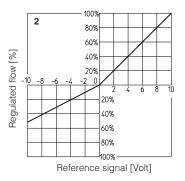

3 = Differential non linear spool DT7

4 = Non linear spool, T5 (only for DLHZA)

5 = Non linear spool, T3 (only for DLKZA) and T7

6 = Progressive spool V

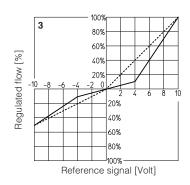

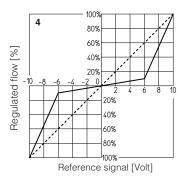

T3, T5 and T7 spool types are specific for fine low flow control in the range from 0 to 60% (T5) and 0 to 40% (T3 and T7) of max spool stroke.

The non linear characteristics of the spool is compensated by the electronic driver, so the final valve regulation is resulting linear respect the reference signal (dotted line).

DT7 has the same characteristic of T7 but it is specific for applications with cylinders with area ratio 1:2

Note:

Hydraulic configuration vs. reference signal:

Standard:

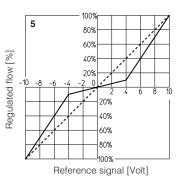

Reference signal $0 \div +10 \text{ V} \\ 12 \div 20 \text{ mA} P \rightarrow A/B \rightarrow T$

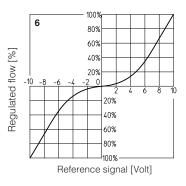

Reference signal $\begin{array}{cc} 0 \div -10 \text{ V} \\ 12 \div 4 \text{ mA} \end{array} \} P \rightarrow B \text{ / A} \rightarrow T$

option /B:

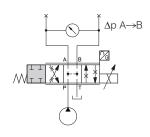

Reference signal $0 \div +10 \text{ V}$ $12 \div 20 \text{ mA}$ $P \rightarrow B / A \rightarrow T$

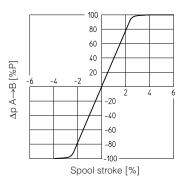

Reference signal $\begin{array}{c} 0 \div -10 \text{ V} \\ 12 \div 4 \text{ mA} \end{array} \} P \rightarrow A / B \rightarrow T$
