(1) Coil can be supplied also with 60 Hz of voltage frequency: in this case the performances are reduced by 10-15% and the power consumption is 55 VA

(2) Average values based on tests performed at nominal hydraulic condition and ambient/coil temperature of 20°C.

(3) When solenoid is energized, the inrush current is approx 3 times the holding current. Inrush current values correspond to a power consumption of about 150 VA.

## 7 OPTIONS

- /A** = Solenoid mounted at side of port A of main body (only for single solenoid valves).  
In standard version, solenoid is mounted at side of port B.
- /D** = Internal drain (standard configuration is external drain)
- /E** = External pilot pressure (standard configuration is internal pilot pressure).
- /R** = Pilot pressure generator 4 bar on port P - not for DPHL-1 see section 8
- /S** = Main spool stroke adjustment - not for DPHL-1.
- /WP** = Prolonged manual override protected by rubber cap.

 The manual override operation can be possible only if the pressure at T port is lower than 50 bar

## FUNCTIONAL SCHEME (config. 71) example of switching control options

### Devices for main spool switching control and to reduce the hydraulic shocks at the valve operation

- /H** = Adjustable chokes (meter-out to the pilot chambers of the main valve).
  - /H9** = Adjustable chokes (meter-in to the pilot chambers of the main valve).
  - /L1, /L2, /L3** = calibrated restrictors on A and B ports of the pilot valve: **L1** = 0,8mm, **L2** = 1mm, **L3** = 1,25mm) - not for DPHL-1.
  - /L9** = plug with calibrated restrictor in P port of pilot valve - see section 12 - only for DPHL-2 and DPHL-4.
- Suggested for pilot pressure higher than 210 bar or to limit the hydraulics shocks caused by the fast main spool switching

- TEST CONDITIONS
  - Nominal voltage supply DC (direct) and AC (alternating) with connector type SP-666. The use of other connectors can affect the switching time;
  - 2 bar of counter pressure on port T;
  - mineral oil: ISO VG 46 at 50°C
- The response time is affected by elasticity of the hydraulic circuit, by variation of hydraulic characteristics and temperature.

**12 PLUGS LOCATION FOR PILOT/DRAIN CHANNELS**

Depending on the position of internal plugs, different pilot/drain configurations can be obtained as shown below. To modify the pilot/drain configuration, proper plugs must only be interchanged. The plugs have to be sealed using loctite 270. Standard valves configuration provides internal pilot and external drain
