

Proportional directional valves

piloted, with LVDT transducer and positive spool overlap

DPZO-T

Proportional directional valves, piloted, with LVDT position transducer (main stage) and positive spool overlap for directional controls and not compensated flow regulations.

The valves operate in association with digital off-board drivers, see section [3].

With de-energized proportional solenoids, mechanical central position of the spool is performed by centering springs.

Spools regulation characteristics:

L = linear

S = progressive for fine low flow control

D and DL = differential-progressive, for control of actuators with area ratio 1:2

D9 and L9 = for regenerative circuit

Size: **10 ÷ 32** - ISO 4401

Max flow: **180 ÷ 1600 l/min**

Max pressure: **350 bar**

For the valves with digital electronics the dynamics performances can be optimized by setting the internal software parameters.
