

Digital servoproportionals with on-board axis card

piloted, single solenoid, with two LVDT transducers and zero spool overlap, autotuning

DPZO-LEZ

Digital servoproportional directional valves, piloted, single solenoid, with on-board digital driver + axis card, two LVDT position transducers and zero spool overlap for position closed loop controls of linear or rotative hydraulic actuator.

The controlled actuator has to be equipped with position transducer (analog, potentiometer, SSI or Encoder) to read the axis position feedback.

The valve can be operated via an external reference signal or automatic cycle, see section 2.

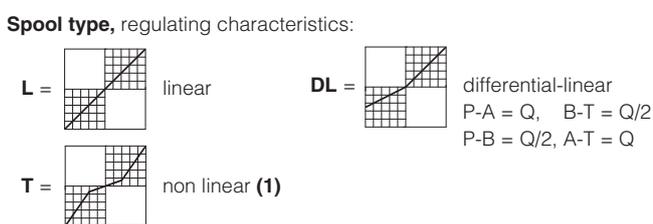

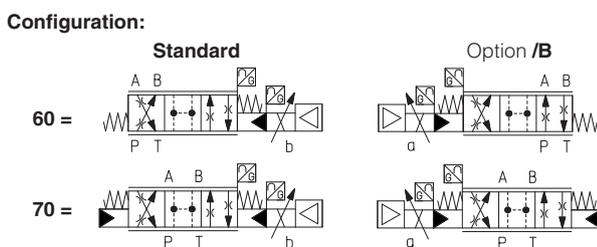

Optional alternated P/Q control add the force limitation to position regulation, requiring pressure or force transducers installation.

Smart Start-up procedure makes the commissioning quicker and easier, thanks to the Autotuning and Smart Tuning functionalities. Multiple PID sets allows to easily switch axis behaviour according to machine cycle.

Size: **10 ÷ 35** - ISO 4401
 Max flow: **180 ÷ 3500 l/min**
 Max pressure: **350 bar**

1 MODEL CODE

DPZO	-	LEZ	-	D	-	SN	-	NP	-	2		70	-	L		5	/	*		*	/	*										
Servoproportional directional valves, piloted																																
LEZ = on-board digital driver + axis card, two LVDT transducers																																
Position transducer type: A = Analog (standard, potentiometer) D = Digital (SSI, Encoder)																																
Alternated P/Q controls, see section 3: SN = none SF = force control (2 pressure transducers) SL = force control (1 load cell)																																
Fieldbus interface, USB port always present: NP = Not Present BC = CANopen EW = POWERLINK BP = PROFIBUS DP EI = EtherNet/IP EH = EtherCAT EP = PROFINET RT/IRT																																
Valve size ISO 4401: 1 = 10 2 = 16 4 = 25 4M = 27 6 = 32 8 = 35																																
Seals material, see section 14: - = NBR PE = FKM BT = NBR low temperature																																
Series number																																

Hydraulic options (2):
B = solenoid with on-board digital driver + axis card and LVDT transducer at side of port B of the main stage (side A of pilot valve)
D = internal drain
E = external pilot pressure
G = pressure reducing valve for piloting (standard for DPZO-1)

Electronics options (2):
C = current feedback for analog position and pressure transducers 4÷20mA
I = current reference input and monitor 4÷20mA

Safety options TÜV certified (2):
U = safe double power supply
K = safe on/off signals
 See section 10

DPZO-8	-	-	1200	-

Nominal flow (l/min) at Δp 10bar P-T

(1) Not available for configuration 60 (2) For possible combined options consult Atos technical office

2 POSITION CONTROL

2.1 External reference signal

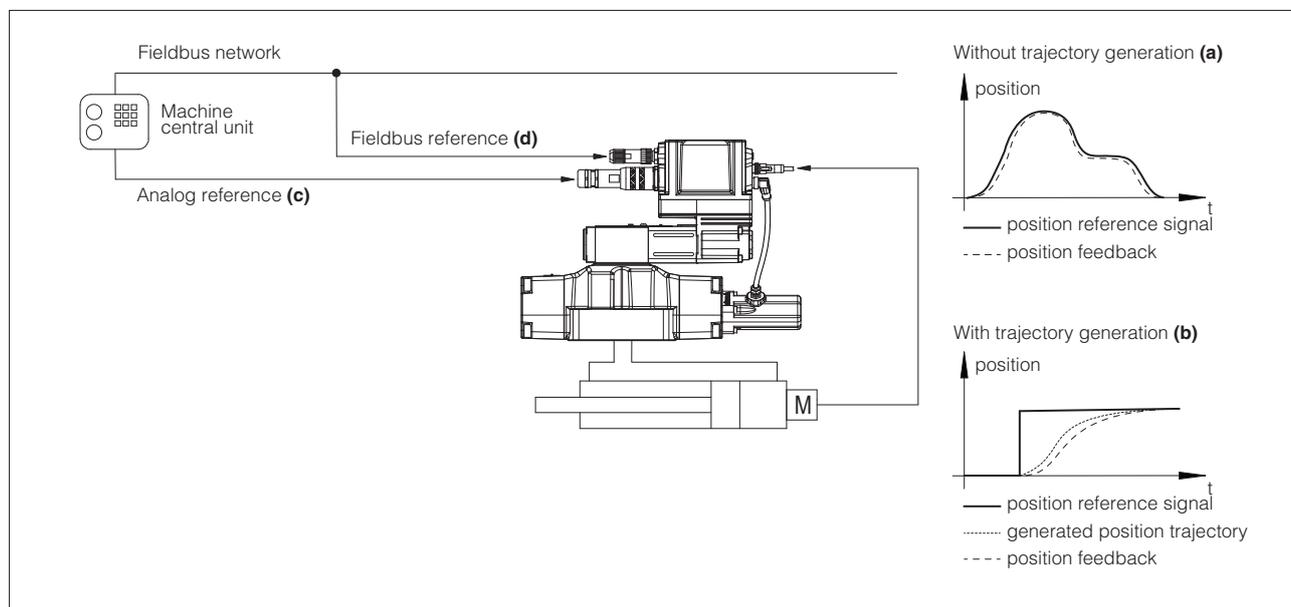

Axis card controls in closed loop the actuator position according to a position reference signal from the machine central unit.

Position profile can be managed in two ways (software selectable):

- Without trajectory generation **(a)**: the axis card receives from the machine central unit the position reference signal and follows it at any given instant
- With trajectory generation **(b)**: the axis card receives from the machine central unit just the final target position and internally generates a position profile limiting acceleration, velocity and deceleration

The position reference signal can be software selected between Analog reference **(c)** and Fieldbus reference **(d)**.

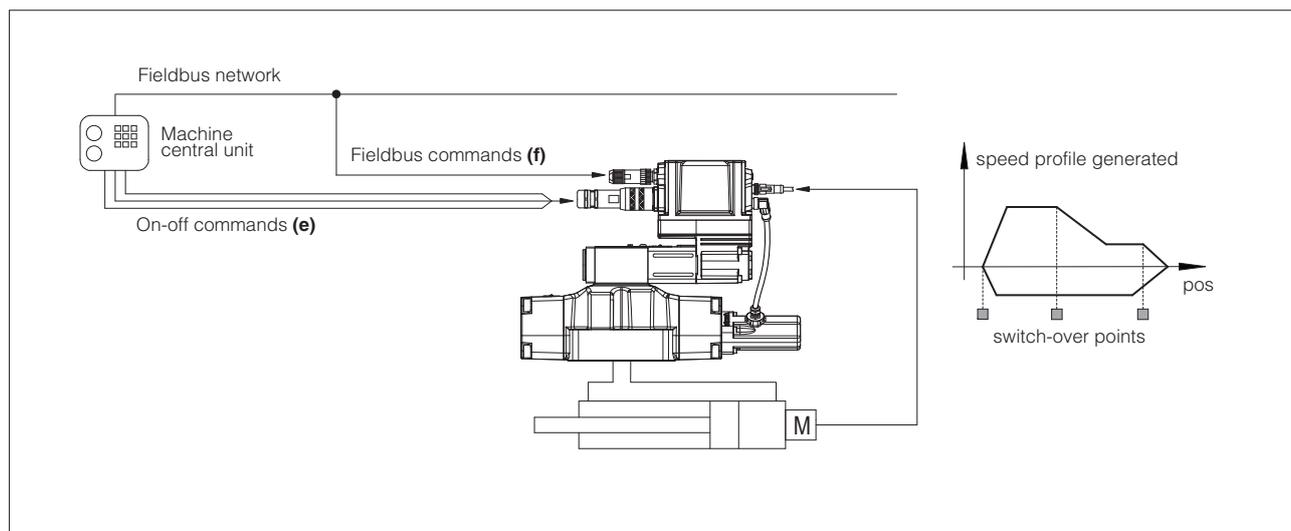

Refer to the axis card user manual for further details on position control features.

2.2 Automatic cycle

Axis card controls in closed loop the actuator position according to an internally generated automatic cycle: only start, stop and switch-over commands are required from the machine electronic central unit by means On-off commands **(e)** or Fieldbus commands **(f)**.

Atos PC software allows to realize an automatic cycle according to the application requirements. Refer to the axis card user manual for further details on automatic cycle features.

3 ALTERNATED POSITION / FORCE CONTROL

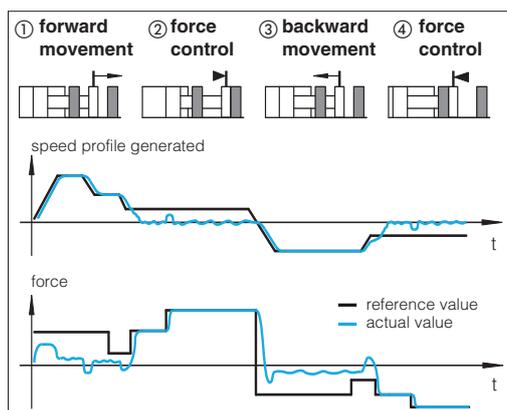

SF and **SL** controls add the alternated force closed loop control to the actuator standard position control. Pressure or force remote transducers have to be installed on the actuator and interfaced to the valve, see below functional schemes.

The position/force controls are operated according to two separate reference signals and a dedicated algorithm automatically selects which control is active time by time.

The dynamics of the switching between the two controls can be regulated thanks to specific software setting, in order to avoid instability and vibrations.

Position control is active (see phase ① and ③ at side) when the actuator force is lower than the relevant reference signal - the valve controls the actuator position by closed-loop regulation.

Force control is active (see phase ② and ④ at side) when the actuator actual force, measured by remote transducers, grows up to the relevant reference signal - the axis card reduces the valve's regulation in order to limit the actuator force; if the force tends to decrease under its reference signal, the position control returns active.

Alternated control configurations

SF	SL
<p>two remote pressure transducers have to be installed on the actuator's ports; the actuator force is calculated by the pressure feedbacks ($P_a - P_b$)</p>	<p>one load cell transducer has to be installed between the actuator and the controlled load</p>
<p>T valve spool transducer</p>	<p>M actuator position transducer</p>
<p>P pressure transducer</p>	<p>L load cell</p>

SF – position/force control

Adds force control to standard position control and permits to limit the max force in two directions controlling in closed loop the delta pressure acting on both sides of the hydraulic actuator. Two pressure transducers have to be installed on A and B hydraulic lines.

SL – position/force control

Adds force control to standard position control and permits to limit the max force in one or two directions controlling in closed loop the force performed by the hydraulic actuator. A load cell has to be installed on the hydraulic actuator.

General Notes:

- auxiliary check valves are recommended in case of specific hydraulic configuration requirements in absence of power supply or fault
- Atos technical office is available for additional evaluations related to specific applications

4 GENERAL NOTES

Atos digital proportionals valves are CE marked according to the applicable directives (e.g. Immunity and Emission EMC Directive). Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in tech table **FS900** and in the user manuals included in the Z-SW-* programming software.

5 VALVE SETTINGS AND PROGRAMMING TOOLS

Valve's functional parameters and configurations, can be easily set and optimized using Atos Z-SW programming software connected via USB/Bluetooth to the axis card. For fieldbus versions, the software permits valve's parameterization through USB/Bluetooth also if the axis card is connected to the central machine unit via fieldbus.

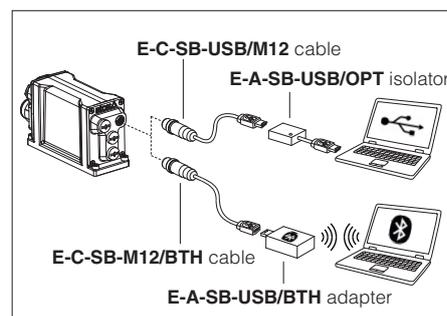

Z-SW-FULL support:	NP (USB)	PS (Serial)	
	BC (CANopen)	BP (PROFIBUS DP)	EH (EtherCAT)
	EW (POWERLINK)	EI (EtherNet/IP)	EP (PROFINET)

Note: Z-SW programming software supports valves with option SF, SL for alternated control

WARNING: axis card USB port is not isolated! For E-C-SB-USB/M12 cable, the use of isolator adapter is highly recommended for PC protection (see tech table **GS500**)

WARNING: see tech table **GS500** for the list of countries where the Bluetooth adapter has been approved

USB or Bluetooth connection

6 SMART START-UP

The automatic procedure supports the user during the commissioning phases of the axis control with guided procedures:

• General setting

It assists the user in system data setup, as like cylinder stroke, diameters, load mass, configure analog/digital signals and communication interface, position transducer setup.

• System check

It automatically executes position open loop movements to set axis control parameters, position transducer calibration and verify cylinder stroke.

• Position autotuning

It automatically determines the optimal PID parametrization of the position control adapting the dynamic response to guarantee control precision and axis stability. Once the procedure is started, the control performs few automatic position open loop movements of the actuator, during which control parameters are calculated and stored.

7 SMART TUNING

Once the Smart Start-up procedure has been completed, the Smart tuning feature allows to further refine the position control response by choosing from 3 different levels of performance in positioning:

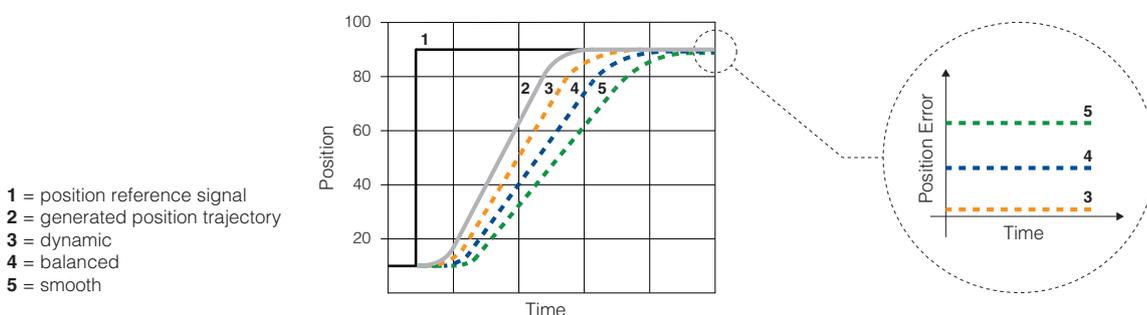

- **dynamic** best dynamics and accuracy (default factory setting)

- **balanced** average dynamics and accuracy

- **smooth** attenuated dynamics and accuracy to improve control stability in critical applications or in environments with electrical disturbances

Settings can be changed any time via Z-SW software or fieldbus.

If required, control performance can be further customized by modifying PID parameter via Z-SW software.

8 MULTIPLE SETS

Multiple PID sets allows to easily switch axis behaviour according to machine cycle, selecting between independent groups of parameters for:

- **position control PID**

- **force control PID and P/Q logics switching criteria**

Settings can be changed any time via Z-SW software, fieldbus or digital input signals.

9 FIELDBUS - see tech. table GS510

Fieldbus allows valve direct communication with machine control unit for digital reference, valve diagnostics and settings. These execution allow to operate the valves through fieldbus or analog signals available on the main connector.

10 SAFETY OPTIONS

Atos range of proportional directional valves, provides functional safety options **/U** and **/K**, designed to accomplish a safety function, intended to reduce the risk in process control systems.

They are **TÜV certified** in compliance to **IEC 61508 up to SIL 3** and **ISO 13849 up to category 4, PL e**

Safe double power supply, option **/U**: the axis card has separate power supplies for logic and solenoids. The safe condition is reached by cutting the electrical supply to solenoids, while electronics remains active for monitoring functions and fieldbus communication, see tech table **FY100**

Safety function via on/off signals, option **/K**: upon a disable command, the axis card checks the spool position and it provides on-off acknowledgement signal only when the valve is in safe condition, see tech table **FY200**

11 GENERAL CHARACTERISTICS

Assembly position	Any position
Subplate surface finishing to ISO 4401	Acceptable roughness index: Ra ≤0,8, recommended Ra 0,4 – Flatness ratio 0,01/100
MTTFd valves according to EN ISO 13849	75 years, for further details see technical table P007
Ambient temperature range	Standard = -20°C ÷ +60°C /PE option = -20°C ÷ +60°C /BT option = -40°C ÷ +60°C
Storage temperature range	Standard = -20°C ÷ +70°C /PE option = -20°C ÷ +70°C /BT option = -40°C ÷ +70°C
Surface protection	Zinc coating with black passivation, galvanic treatment (driver housing)
Corrosion resistance	Salt spray test (EN ISO 9227) > 200 h
Vibration resistance	See technical table G004
Compliance	CE according to EMC directive 2014/30/EU (Immunity: EN 61000-6-2; Emission: EN 61000-6-3) RoHS Directive 2011/65/EU as last update by 2015/863/EU REACH Regulation (EC) n°1907/2006

12 HYDRAULIC CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

Valve model	DPZO-*-1	DPZO-*-2			DPZO-*-4	DPZO-*-4M	DPZO-*-6	DPZO-*-8
Pressure limits [bar]	ports P, A, B, X = 350; T = 250 (10 for option /D); Y = 10;							
Spool type	L5, DL5	L3	L5, DL5	T5	L5, DL5		L5	
Nominal flow Δp P-T [l/min]								
(1) $\Delta p = 10$ bar	100	160	250	190	480	550	640	1200
$\Delta p = 30$ bar	160	270	430	330	830	950	1100	2000
Max permissible flow [l/min]	180	400	550	550	1000	1100	1600	3500
Piloting pressure [bar]	min. = 25; max = 350 (option /G advisable for pilot pressure > 200 bar)							
Piloting volume [cm ³ /min]	1,4	3,7			9	11,3	21,6	39,8
Piloting flow (2) [l/min]	3,5	9			18	20	19	24
Leakage (3) Pilot [cm ³ /min]	100 / 300	150 / 450			200 / 600	200 / 600	900 / 2800	900 / 2800
Main stage [l/min]	0,4 / 1,2	0,6 / 2,5			1,0 / 4,0	1,0 / 4,0	3,0 / 9,0	6,0 / 20
Response time (4) [ms]	≤ 25	≤ 25			≤ 30	≤ 35	≤ 80	≤ 100
Hysteresis	≤ 0,1 [%of max regulation]							
Repeatability	± 0,1 [%of max regulation]							
Thermal drift	zero point displacement < 1% at $\Delta T = 40^\circ C$							

(1) For different Δp , the max flow is in accordance to the diagrams in section 15.2

(2) With step reference input signal 0 ÷ 100 %

(3) At p = 100/350 bar

(4) 0-100% step signal, see detailed diagrams in section 15.3

13 ELECTRICAL CHARACTERISTICS

Power supplies	Nominal : +24 VDC Rectified and filtered : $V_{RMS} = 20 \div 32 V_{MAX}$ (ripple max 10 % VPP)			
Max power consumption	50 W			
Max. solenoid current	2,6 A			
Coil resistance R at 20°C	$3 \div 3,3 \Omega$			
Analog input signals	Voltage: range ± 10 Vdc (24 VMAX tollerant) Current: range ± 20 mA		Input impedance: $R_i > 50 k\Omega$ Input impedance: $R_i = 500 \Omega$	
Monitor outputs	Output range: voltage ± 10 Vdc @ max 5 mA current ± 20 mA @ max 500 Ω load resistance			
Enable input	Range: 0 \div 5 Vdc (OFF state), 9 \div 24 Vdc (ON state), 5 \div 9 Vdc (not accepted); Input impedance: $R_i > 10 k\Omega$			
Fault output	Output range: 0 \div 24 Vdc (ON state > [power supply - 2 V] ; OFF state < 1 V) @ max 50 mA; external negative voltage not allowed (e.g. due to inductive loads)			
Position transducers power supply	+24 Vdc @ max 100 mA and +5 Vdc @ max 100 mA are software selectable; ± 10 Vdc @ max 14 mA minimum load resistance 700 Ω			
Pressure/Force transducer power supply (only for SF, SL)	+24Vdc @ max 100 mA (E-ATR-8 see tech table GS465)			
Alarms	Solenoid not connected/short circuit, cable break with current reference signal, over/under temperature, valve spool transducer malfunctions, alarms history storage function			
Insulation class	H (180°) Due to the occuring surface temperatures of the solenoid coils, the European standards ISO 13732-1 and EN982 must be taken into account			
Protection degree to DIN EN60529	IP66 / IP67 with mating connectors			
Duty factor	Continuous rating (ED=100%)			
Tropicalization	Tropical coating on electronics PCB			
Additional characteristics	Short circuit protection of solenoid's current supply; 3 leds for diagnostic; spool position control, force control (SF, SL) by axis P.I.D. with rapid solenoid switching; protection against reverse polarity of power supply			
Electromagnetic compatibility (EMC)	According to Directive 2014/30/UE (Immunity: EN 61000-6-2; Emission: EN 61000-6-3)			
Communication interface	USB	CANopen	PROFIBUS DP	EtherCAT, POWERLINK, EtherNet/IP, PROFINET IO RT / IRT EC 61158
	Atos ASCII coding	EN50325-4 + DS408	EN50170-2/IEC61158	
Communication physical layer	not insulated USB 2.0 + USB OTG	optical insulated CAN ISO11898	optical insulated RS485	Fast Ethernet, insulated 100 Base TX
Recommended wiring cable	LiYCY shielded cables, see section 22			

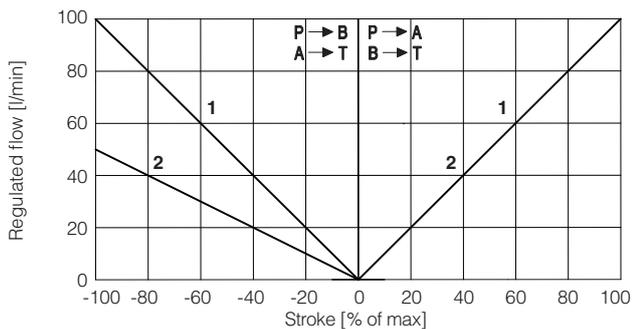

Note: a maximum time of 800 ms (depending on communication type) have be considered between the axis card energizing with the 24 Vdc power supply and when the valve is ready to operate. During this time the current to the valve coils is switched to zero.

14 SEALS AND HYDRAULIC FLUIDS - for other fluids not included in below table, consult our technical office

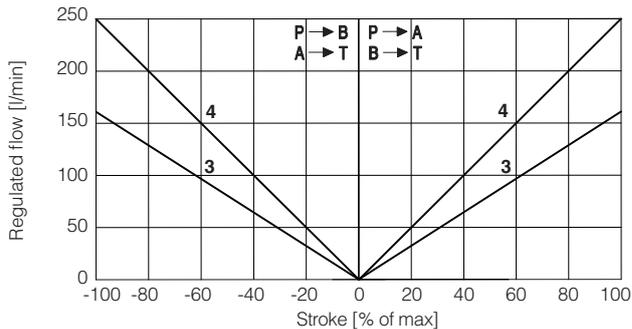

Seals, recommended fluid temperature	NBR seals (standard) = -20°C \div +60°C, with HFC hydraulic fluids = -20°C \div +50°C FKM seals (/PE option) = -20°C \div +80°C NBR low temp. seals (/BT option) = -40°C \div +60°C, with HFC hydraulic fluids = -20°C \div +50°C		
Recommended viscosity	20 \div 100 mm ² /s - max allowed range 15 \div 380 mm ² /s		
Max fluid contamination level	normal operation	ISO4406 class 18/16/13 NAS1638 class 7	see also filter section at www.atos.com or KTF catalog
	longer life	ISO4406 class 16/14/11 NAS1638 class 5	
Hydraulic fluid	Suitable seals type	Classification	Ref. Standard
Mineral oils	NBR, FKM, NBR low temp.	HL, HLP, HLPD, HVLP, HVLPD	DIN 51524
Flame resistant without water	FKM	HFDR, HFDR	ISO 12922
Flame resistant with water	NBR, NBR low temp.	HFC	

15 **DIAGRAMS** (based on mineral oil ISO VG 46 at 50 °C)

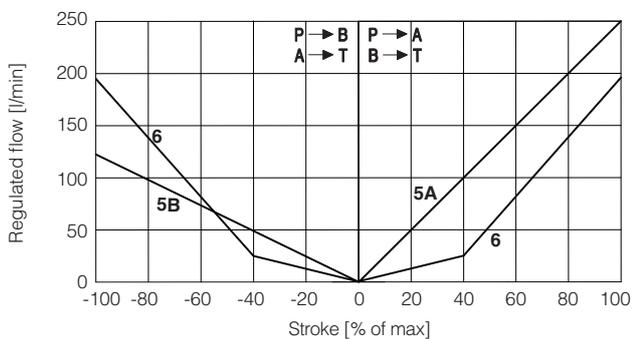

15.1 Regulation diagrams (values measure at Δp 10 bar P-T)

16 HYDRAULIC OPTIONS

- B** = Solenoid, on-board digital driver + axis card and LVDT position transducer at side of port B of the main stage (side A of pilot valve). For hydraulic configuration vs reference signal, see 15.1
- D** = Internal drain (through port T).
Pilot and drain configuration can be modified as shown in the functional scheme here aside. For detailed view of plugs position, see section 25
The valve's standard configuration provides internal pilot and external drain.
- E** = External pilot (through port X).
Pilot and drain configuration can be modified as shown in the functional scheme here aside. For detailed view of plugs position, see section 25
The valve's standard configuration provides internal pilot and external drain.
- G** = Pressure reducing valve ③ with fixed setting, installed between pilot valve and main body. Reduced pressure setting:

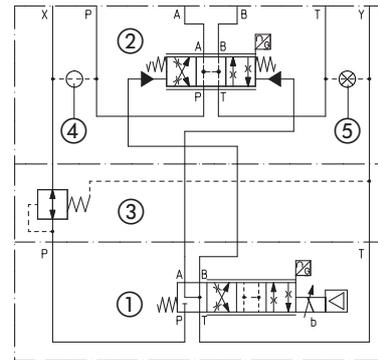

DPZO-2 = **28 bar**

DPZO-1, DPZO-2, DPZO-4(M), DPZO-6 and DPZO-8 = **40 bar**

It is advisable for valves with internal pilot in case of system pressure higher than 200 bar.

Pressure reducing valve ③ is standard for DPZO-1, for other sizes add /G option.

Functional Scheme - example of configuration 70

- ① Pilot valve
② Main stage
③ Pressure reducing valve
④ Plug to be added for external pilot trough port X
⑤ Plug to be removed for internal drain through port T

17 ELECTRONICS OPTIONS

- I** = This option provides $4 \div 20$ mA current reference and monitor signals, instead of the standard ± 10 VDC.
Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ± 10 VDC or ± 20 mA.
It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage.
- C** = This option is available to connect analog position transducer and pressure/force transducers with $4 \div 20$ mA current output signal, instead of the standard ± 10 VDC.
Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ± 10 VDC or ± 20 mA.

18 POWER SUPPLY AND SIGNALS SPECIFICATIONS

Generic electrical output signals of the valve (e.g. fault or monitor signals) must not be directly used to activate safety functions, like to switch-ON/OFF the machine's safety components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, ISO 4413).

For certified safety options: **/U** see tech. table **FY100** and **/K** see tech. table **FY200**

18.1 Power supply (V+ and V0)

The power supply must be appropriately stabilized or rectified and filtered: apply at least a 10000 $\mu\text{F}/40\text{ V}$ capacitance to single phase rectifiers or a 4700 $\mu\text{F}/40\text{ V}$ capacitance to three phase rectifiers. In case of separate power supply see 18.2.

 A safety fuse is required in series to each power supply: 2,5 A time lag fuse.

18.2 Power supply for axis card logic and communication (VL+ and VL0)

The power supply for axis card logic and communication must be appropriately stabilized or rectified and filtered: apply at least a 10000 $\mu\text{F}/40\text{ V}$ capacitance to single phase rectifiers or a 4700 $\mu\text{F}/40\text{ V}$ capacitance to three phase rectifiers.

The separate power supply for axis card logic on pin 9 and 10, allow to remove solenoid power supply from pin 1 and 2 maintaining active the diagnostics, USB and fieldbus communications.

 A safety fuse is required in series to each axis card logic and communication power supply: 500 mA fast fuse.

18.3 Position reference input signal (P_INPUT+)

Functionality of P_INPUT+ signal (pin 4), depends on axis card reference mode, see section [2](#) :

external analog reference (see 2.1): input is used as reference for control in closed loop the actuator position.

Reference input signal is factory preset according to selected valve code, defaults are $\pm 10\text{ VDC}$ for standard and $4 \div 20\text{ mA}$ for /I option. Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of $\pm 10\text{ VDC}$ or $\pm 20\text{ mA}$.

external fieldbus reference (see 2.1) or *automatic cycle* (see 2.2): analog reference input signal can be used as on-off commands with input range $0 \div 24\text{ VDC}$.

18.4 Force reference input signal (F_INPUT+) - only for SF, SL

Functionality of F_INPUT+ signal (pin 7), depends on selected axis card reference mode and alternated control options, see section [3](#) :

SL, SF controls and external analog reference selected : input is used as reference for the axis card force closed loop.

Reference input signal is factory preset according to selected valve code, defaults are $\pm 10\text{ VDC}$ for standard and $4 \div 20\text{ mA}$ for /I option. Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of $\pm 10\text{ VDC}$ or $\pm 20\text{ mA}$.

SN control or fieldbus reference selected: analog reference input signal can be used as on-off commands with input range $0 \div 24\text{ VDC}$.

18.5 Position monitor output signal (P_MONITOR)

The axis card generates an analog output signal proportional to the actual axis position; the monitor output signal can be software set to show other signals available in the axis card (e.g. analog reference, fieldbus reference, position error, valve spool position).

Monitor output signal is factory preset according to selected valve code, defaults are $\pm 10\text{ VDC}$ for standard and $4 \div 20\text{ mA}$ for /I option.

Output signal can be reconfigured via software selecting between voltage and current, within a maximum range of $\pm 10\text{ VDC}$ or $\pm 20\text{ mA}$.

18.6 Force monitor output signal (F_MONITOR) - only for SF, SL

The axis card generates an analog output signal according to alternated force control option:

SN control: output signal is proportional to the actual valve spool position

SL, SF controls: output signal is proportional to the actual force applied to the cylinder's rod end

Monitor output signals can be software set to show other signals available in the axis card (e.g. analog reference, force reference).

The output range and polarity are software selectable within the maximum range $\pm 10\text{ VDC}$ or $\pm 20\text{ mA}$.

Monitor output signal is factory preset according to selected valve code, defaults are $\pm 10\text{ VDC}$ for standard and $4 \div 20\text{ mA}$ for /I option.

Output signal can be reconfigured via software selecting between voltage and current, within a maximum range of $\pm 10\text{ VDC}$ or $\pm 20\text{ mA}$.

18.7 Enable input signal (ENABLE)

To enable the axis card, a 24VDC voltage has to be applied on pin 3.

When the Enable signal is set to zero the axis card can be software set to perform one of the following actions:

- maintain the actuator actual position in close loop control
- move towards a predefined position in closed loop control and maintains the reached position (hold position)
- move forward or backward in open loop (only the valve's closed loop remain active)

18.8 Fault output signal (FAULT)

Fault output signal indicates fault conditions of the axis card (solenoid short circuits/not connected, reference or transducer signal cable broken, maximum error exceeded, etc.). Fault presence corresponds to 0 Vdc, normal working corresponds to 24 Vdc.

Fault status is not affected by the Enable input signal.

Fault output signal can be used as digital output by software selection.

18.9 Position transducer input signal

A position transducer must be always directly connected to the axis card. Select the correct axis card execution depending on the desired transducer interface: digital SSI or Encoder (D execution), potentiometer or a generic transducer with analog interface (A execution).

Position digital input signal is factory preset to binary SSI, it can be reconfigured via software selecting between binary/gray SSI and Encoder.

Position analog input signal is factory preset according to selected valve code, defaults are $\pm 10\text{ VDC}$ for standard and $4 \div 20\text{ mA}$ for /C option.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of $\pm 10\text{ VDC}$ or $\pm 20\text{ mA}$.

Refer to position transducer characteristics to select the transducer type according to specific application requirements (see 19.1).

18.10 Remote pressure/force transducer input signals - only for SF, SL

Analog remote pressure transducers or load cell can be directly connected to the axis card.

Analog input signal is factory preset according to selected valve code, defaults are $\pm 10\text{ Vdc}$ for standard and $4 \div 20\text{ mA}$ for /C option.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of $\pm 10\text{ Vdc}$ or $\pm 20\text{ mA}$.

Refer to pressure/force transducer characteristics to select the transducer type according to specific application requirements (see 19.2).

19 ACTUATOR'S TRANSDUCER CHARACTERISTICS

19.1 Position transducers

The accuracy of the position control is strongly dependent to the selected position transducer. Four different transducer interfaces are available on the axis cards, depending to the system requirements: potentiometer or analog signal (A execution), SSI or Encoder (D execution). Transducers with digital interface allow high resolution and accurate measures, that combined with fieldbus communication grants highest performances. Transducers with analog interface grant simple and cost effective solutions.

19.2 Pressure/force transducers

The accuracy of the pressure/force control is strongly dependent to the selected pressure/force transducer, see section [3]. Alternated pressure/force controls require to install pressure transducers or load cell to measure the actual pressure/force values. Pressure transducers allow easy system integration and cost effective solution for alternated position/force controls (see tech table **GS465** for pressure transducers details). Load cell transducers allow the user to get high accuracy and precise regulations for alternated position/force control.

The characteristics of the remote pressure/force transducers must be always selected to match the application requirements and to obtain the best performances: transducer nominal range should be at least 115%÷120% of the maximum regulated pressure/force.

19.3 Transducers characteristics & interfaces - following values are just for reference, for details please consult the transducer's datasheet

Execution	Position				Pressure/Force
	A		D		SF, SL
Input type	Potentiometer	Analog	SSI (3)	Incremental Encoder	Analog
Power supply (1)	10 ÷ 30 Vdc	+24 Vdc	+24 Vdc	+5 Vdc / +24 Vdc	+24 Vdc
Axis card interface	0 ÷ 10 V	0 ÷ 10V 4 ÷ 20 mA	Serial SSI binary/gray	TTL 5Vpp - 150 KHz	±10 Vdc 4 ÷ 20 mA
Max speed	0,5 m/s	1 m/s	1 m/s	2 m/s	-
Max resolution	< 0.4 % FS	< 0.2 % FS	5 µm	1 µm (@ 0.15 m/s)	< 0.4 % FS
Linearity error (2)	± 0.1% FS	< ±0.02% FS	< ± 0.02 % FS	< ± 0.001 % FS	< ±0.25% FS
Repeatability (2)	± 0.05% FS	< ± 0.005% FS	< ± 0.005 % FS	< ± 0.001 % FS	< ±0.1% FS

(1) Power supply provided by Atos axis card (2) Percentage of total stroke (3) For Balluff BTL7 with SSI interface only special code SA433 is supported

20 ELECTRONIC CONNECTIONS

For electronic connection of certified safety options /U see tech. table **FY100** and /K see tech. table **FY200**

20.1 Main connector - 12 pin (A)

PIN	SIGNAL	TECHNICAL SPECIFICATIONS	NOTES
1	V+	Power supply 24 Vdc	Input - power supply
2	V0	Power supply 0 Vdc	Gnd - power supply
3	ENABLE	Enable (24 Vdc) or disable (0 Vdc) the axis card, referred to VL0	Input - on/off signal
4	P_INPUT+	Position reference input signal: ±10 Vdc / ±20 mA maximum range	Input - analog signal Software selectable
5	INPUT-	Negative reference input signal for P_INPUT+ and F_INPUT+	Gnd - analog signal
6	P_MONITOR	Position monitor output signal: ±10 Vdc / ±20 mA maximum range, referred to VL0	Output - analog signal Software selectable
7	F_INPUT+	Force reference input signal (SF, SL controls): ±10 Vdc / ±20 mA maximum range	Input - analog signal Software selectable
8	F_MONITOR	Force (SF, SL controls) or valve spool position (SN control) monitor output signal: ±10 Vdc / ±20mA maximum range, referred to VL0	Output - analog signal Software selectable
9	VL+	Power supply 24 Vdc for axis card logic and communication	Input - power supply
10	VL0 (1)	Power supply 0 Vdc for axis card logic and communication	Gnd - power supply
11	FAULT	Fault (0 Vdc) or normal working (24 Vdc), referred to VL0	Output - on/off signal
PE	EARTH	Internally connected to axis card housing	

(1) Do not disconnect VL0 before VL+ when the axis card is connected to PC USB port

20.2 Communication connectors (B) - (C)

(B) USB connector - M12 - 5 pin always present		
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)
1	+5V_USB	Power supply
2	ID	Identification
3	GND_USB	Signal zero data line
4	D-	Data line -
5	D+	Data line +

(C1) (C2) BP fieldbus execution, connector - M12 - 5 pin		
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)
1	+5V	Termination supply signal
2	LINE-A	Bus line (high)
3	DGND	Data line and termination signal zero
4	LINE-B	Bus line (low)
5	SHIELD	

(1) Shield connection on connector's housing is recommended

(C1) (C2) BC fieldbus execution, connector - M12 - 5 pin		
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)
1	CAN_SHLD	Shield
2	not used	(C1) - (C2) pass-through connection (2)
3	CAN_GND	Signal zero data line
4	CAN_H	Bus line (high)
5	CAN_L	Bus line (low)

(C1) (C2) EH, EW, EI, EP fieldbus execution, connector - M12 - 4 pin		
PIN	SIGNAL	TECHNICAL SPECIFICATION (1)
1	TX+	Transmitter
2	RX+	Receiver
3	TX-	Transmitter
4	RX-	Receiver
Housing	SHIELD	

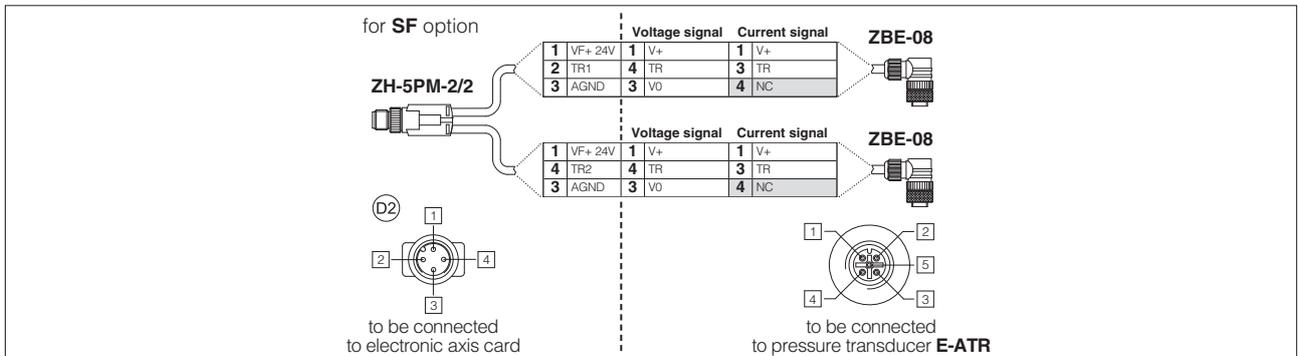

(2) Pin 2 can be fed with external +5V supply of CAN interface

20.3 Remote pressure/force transducer connector - M12 - 5 pin (D)

PIN	SIGNAL	TECHNICAL SPECIFICATION	NOTES	(D1) SL - Single transducer (1)		(D2) SF - Double transducers (1)	
				Voltage	Current	Voltage	Current
1	VF +24V	Power supply +24Vdc	Output - power supply	Connect	Connect	Connect	Connect
2	TR1	1st signal transducer: ±10 Vdc / ±20 mA maximum range	Input - analog signal Software selectable	Connect	Connect	Connect	Connect
3	AGND	Common gnd for transducer power and signals	Common gnd	Connect	/	Connect	/
4	TR2	2nd signal transducer: ±10 Vdc / ±20 mA maximum range	Input - analog signal Software selectable	/	/	Connect	Connect
5	NC	Not connect		/	/	/	/

(1) Single/double transducer configuration is software selectable

Remote pressure transducers connection - example

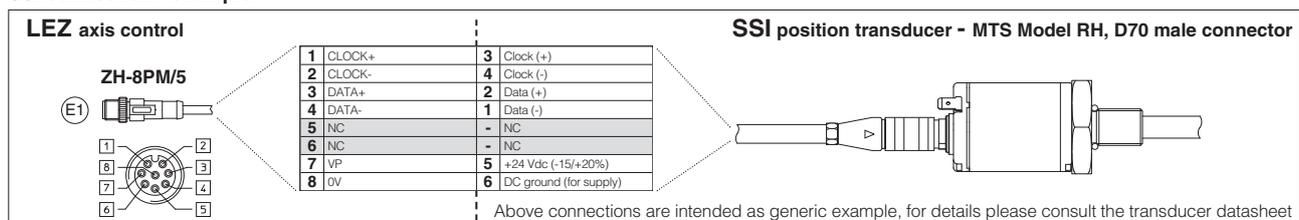

Note: pin layout always referred to axis card view

20.4 D execution - Digital position transducers connector - M12 - 8 pin (E1)

SSI - default transducer (1)				Encoder (1)		
PIN	SIGNAL	TECHNICAL SPECIFICATION	NOTES	SIGNAL	TECHNICAL SPECIFICATION	NOTES
1	CLOCK+	Serial synchronous clock (+)	Input - digital signal	R	Input channel R	Input - digital signal
2	CLOCK-	Serial synchronous clock (-)		/R	Input channel /R	
3	DATA+	Serial position data (+)		A	Input channel A	
4	DATA-	Serial position data (-)		/A	Input channel /A	
5	NC	Not connect	Do not connect	B	Input channel B	
6	NC		Do not connect	/B	Input channel /B	
7	VP	Power supply: +24Vdc, +5Vdc or OFF (default OFF)	Output - power supply Software selectable	VP	Power supply: +24Vdc, +5Vdc or OFF (default OFF)	Output - power supply Software selectable
8	0V	Common gnd for transducer power and signals	Common gnd	0V	Common gnd for transducer power and signals	Common gnd

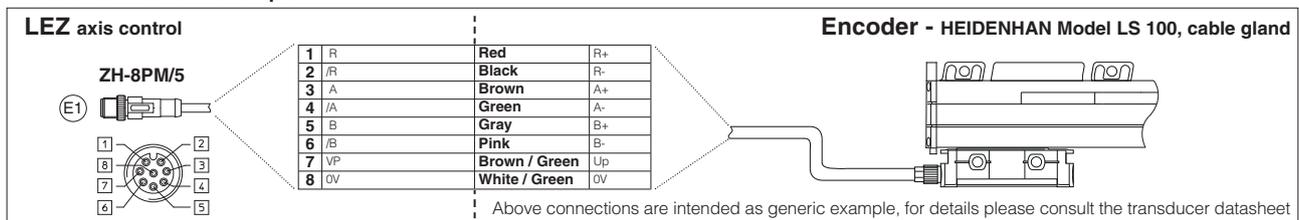

(1) Digital position transducer type is software selectable: Encoder or SSI, see 18.9

SSI connection - example

Note: pin layout referred to axis card view

Encoder connection - example

Note: pin layout referred to axis card view

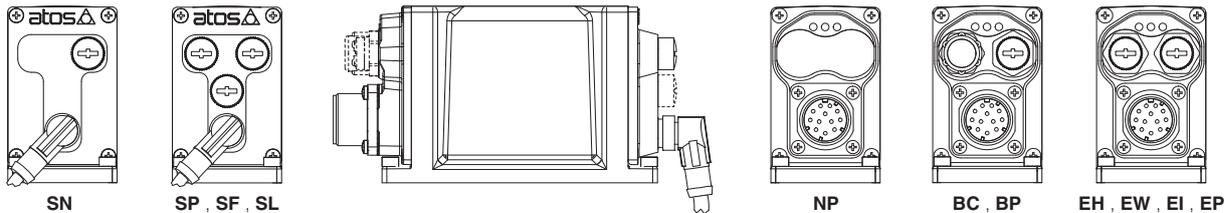

20.5 A execution - Analog position transducers connector - M12 - 5 pin (E2)

PIN	SIGNAL	TECHNICAL SPECIFICATION	NOTES	Potentiometer	Analog
1	VP +24V	Power supply: +24Vdc or OFF (default OFF)	Output - power supply Software selectable	/	Connect
2	VP +10V	Power supply reference +10Vdc (always present)	Output - power supply	Connect	/
3	AGND	Common gnd for transducer power and signals	Common gnd	Connect	Connect
4	TR	Signal transducer	Input - analog signal	Connect	Connect
5	VP -10V	Power supply reference -10Vdc (always present)	Output - power supply	Connect	/

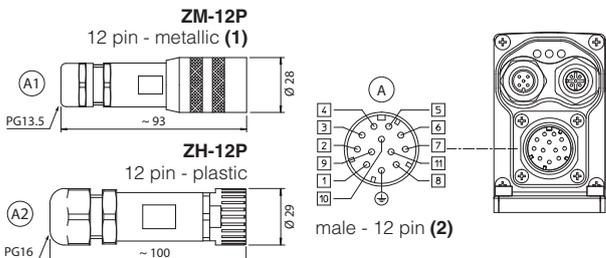

Note: analog input range is software selectable, see 18.9

20.6 LEZ connections layout

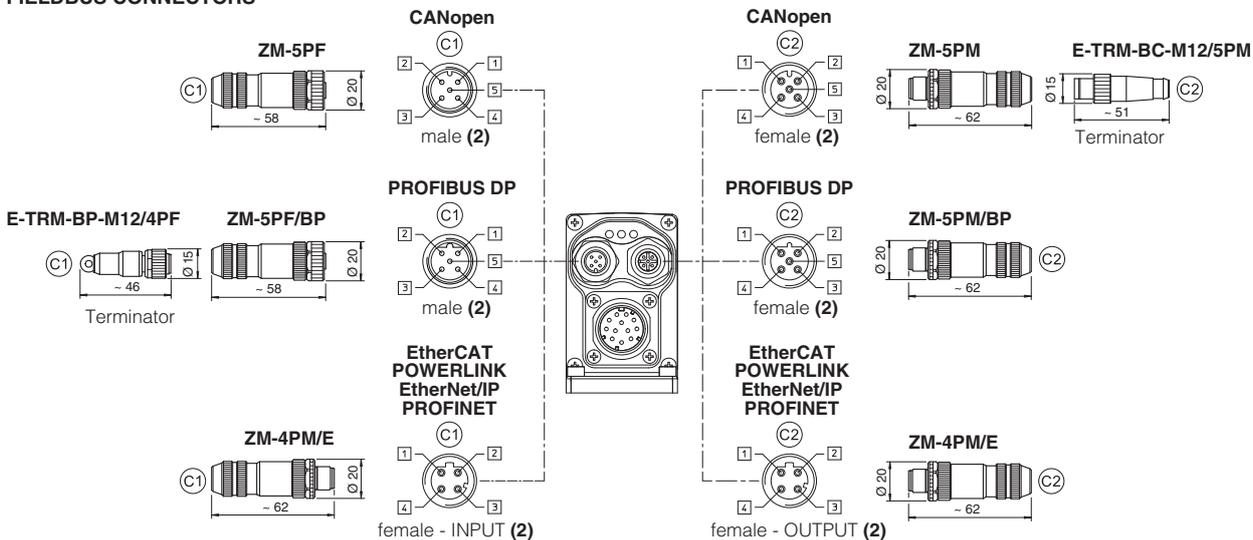

DRIVER OVERVIEW

MAIN CONNECTORS

FIELDBUS CONNECTORS

TRANSDUCERS AND USB CONNECTORS

ZH-5PM/1.5 or ZH-5PM/5
SINGLE FORCE
TRANSDUCER CABLE - SL
cable length 1,5m or 5m

ZH-5PM-2/2
DOUBLE PRESSURE
TRANSDUCERS CABLE - SF
cable length 2m

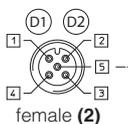

ZH-8PM/5
DIGITAL POSITION
TRANSDUCER CABLE - D
cable length 5m

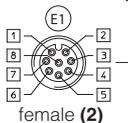

ZH-5PM/1.5 or ZH-5PM/5
ANALOG POSITION
TRANSDUCERS CABLE - A
cable length 1,5m or 5m

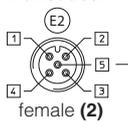

Pressure/Force transducers

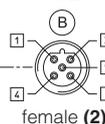

Digital position transducer (SSI or Encoder)

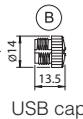

Analog position transducer

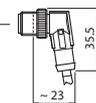

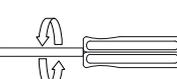

USB

E-C-SB-USB/M12
USB CABLE
cable length 4m

USB cap

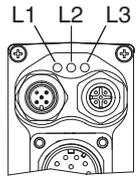

SPOOL POSITION MAIN STAGE DO NOT REMOVE

(1) Use of metallic connectors is strongly recommended in order to fulfill EMC requirements

(2) Pin layout always referred to axis card view

20.7 Diagnostic LEDs L

Three leds show axis card operative conditions for immediate basic diagnostics. Please refer to the axis card user manual for detailed information.

FIELDBUS LEDS	NP Not Present	BC CANopen	BP PROFIBUS DP	EH EtherCAT	EW POWERLINK	EI EtherNet/IP	EP PROFINET	
L1	VALVE STATUS			LINK/ACT				
L2	NETWORK STATUS			NETWORK STATUS				
L3	SOLENOID STATUS			LINK/ACT				

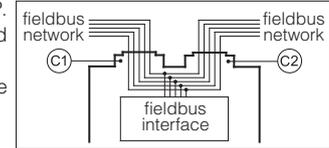

21 IN / OUT FIELDBUS COMMUNICATION CONNECTORS

Two fieldbus communication connectors are always available for digital axis card executions BC, BP, EH, EW, EI, EP. This features allows considerable technical advantages in terms of installation simplicity, wirings reduction and also avoid the usage expensive T-connectors.

For BC and BP executions the fieldbus connectors have an internal pass-through connection and can be used like end point of the fieldbus network, using an external terminator (see tech table **GS500**).

For EH, EW, EI and EP execution the external terminators are not required: each connector is internally terminated.

BC and BP pass-through connection

22 CONNECTORS CHARACTERISTICS - to be ordered separately

22.1 Main connectors

CONNECTOR TYPE	POWER SUPPLY	POWER SUPPLY
CODE	A1 ZM-12P	A2 ZH-12P
Type	12pin female straight circular	12pin female straight circular
Standard	DIN 43651	DIN 43651
Material	Metallic	Plastic reinforced with fiber glass
Cable gland	PG13,5	PG16
Recommended cable	LiYCY 12 x 0,75 mm ² max 20 m (logic and power supply)	LiYCY 10 x 0,14mm ² max 40 m (logic) LiYY 3 x 1mm ² max 40 m (power supply)
Conductor size	0,5 mm ² to 1,5 mm ² - available for 12 wires	0,14 mm ² to 0,5 mm ² - available for 9 wires 0,5 mm ² to 1,5 mm ² - available for 3 wires
Connection type	to crimp	to crimp
Protection (EN 60529)	IP 67	IP 67

22.2 Fieldbus communication connectors

CONNECTOR TYPE	BC CANopen (1)		BP PROFIBUS DP (1)		EH EtherCAT, EW POWERLINK, EI EtherNet/IP, EP PROFINET (2)
CODE	C1 ZM-5PF	C2 ZM-5PM	C1 ZM-5PF/BP	C2 ZM-5PM/BP	C1 C2 ZM-4PM/E
Type	5 pin female straight circular	5 pin male straight circular	5 pin female straight circular	5 pin male straight circular	4 pin male straight circular
Standard	M12 coding A – IEC 61076-2-101		M12 coding B – IEC 61076-2-101		M12 coding D – IEC 61076-2-101
Material	Metallic		Metallic		Metallic
Cable gland	Pressure nut - cable diameter 6÷8 mm		Pressure nut - cable diameter 6÷8 mm		Pressure nut - cable diameter 4÷8 mm
Cable	CANbus Standard (DR 303-1)		PROFIBUS DP Standard		Ethernet standard CAT-5
Connection type	screw terminal		screw terminal		terminal block
Protection (EN 60529)	IP67		IP 67		IP 67

(1) E-TRM-** terminators can be ordered separately, see tech table **GS500**

(2) Internally terminated

22.3 Pressure/Force transducer connectors - only for SF, SL

CONNECTOR TYPE	SL - Single transducer		SF - Double transducers
CODE	D1 ZH-5PM/1.5	D1 ZH-5PM/5	D2 ZH-5PM-2/2
Type	5 pin male straight circular		4 pin male straight circular
Standard	M12 coding A – IEC 61076-2-101		M12 coding A – IEC 61076-2-101
Material	Plastic		Plastic
Cable gland	Connector moulded on cables 1,5 m lenght 5 m lenght		Connector moulded on cables 2 m lenght
Cable	5 x 0,25 mm ²		3 x 0,25 mm ² (both cables)
Connection type	molded cable		splitting cable
Protection (EN 60529)	IP 67		IP 67

22.4 Position transducer connectors

CONNECTOR TYPE	DIGITAL POSITION TRANSDUCER D execution - see 20.4	ANALOG POSITION TRANSDUCER A execution - see 20.5	
CODE	E1 ZH-8PM/5	E2 ZH-5PM/1.5	E2 ZH-5PM/5
Type	8 pin male straight circular	5 pin male straight circular	
Standard	M12 coding A – IEC 61076-2-101	M12 coding A – IEC 61076-2-101	
Material	Plastic	Plastic	
Cable gland	Connector moulded on cables 5 m lenght	Connector moulded on cables 1,5 m lenght 5 m lenght	
Cable	8 x 0,25 mm ²	5 x 0,25 mm ²	
Connection type	molded cable	molded cable	
Protection (EN 60529)	IP 67	IP 67	

23 MAIN SOFTWARE PARAMETER SETTINGS

For a detailed descriptions of the available settings, wirings and installation procedures, please refer to the user manuals included in the Z-SW programming software:

Z-MAN-RI-LEZ - user manual for **TEZ** and **LEZ** with **SN**

Z-MAN-RI-LEZ-S - user manual for **TEZ** and **LEZ** with **SF, SL**

23.1 External reference and transducer parameters

Allow to configure the axis card reference and transducer inputs, analog or digital, to match the specific application requirements:

- *Scaling parameters* define the correspondence of these signals with the specific actuator stroke or force to be controlled
- *Limit parameters* define maximum/minimum stroke and force to detect possible alarm conditions
- *Homing parameters* define the startup procedure to initialize incremental transducer (e.g. Encoder)

23.2 PID control dynamics parameters

Allow to optimize and adapt the axis card closed loop to the wide range of hydraulic system characteristics:

- *PID parameters* each part of the closed loop algorithm (proportional, integral, derivative, feed forward, fine positioning, etc) can be modified to match the application requirements

23.3 Monitoring parameters

Allow to configure the axis card monitoring function of the positioning error (difference between actual reference and feedback) and detects anomalous conditions:

- *Monitoring parameters* maximum allowed errors can be set for both static and dynamic positioning phases, and dedicated waiting times can be set to delay the activation of the alarm condition and relevant reaction (see 23.4)

23.4 Fault parameters

Allow to configure how the axis card detect and react to alarm conditions:

- *Diagnostics parameters* define different conditions, threshold and delay time to detect alarm conditions
- *Reaction parameters* define different actions to be performed in case of alarm presence (stop at actual or preprogrammed position, emergency forward/backward, axis card disabling, etc.)

23.5 Valve characteristics compensation

Allow to modify the valve regulation to match the actuator/system characteristics and to obtain the best overall performances:

- *Valve parameters* modify the standard valve regulation by means of deadband compensation, curve linearization and differentiated gain for positive and negative regulation

23.6 Motion phases parameters

When the internal reference generation is active a pre-programmed cycle can be generated; start/stop/switch-over commands and reference generation types parameters can be set to design a customized sequence of motion phases adapted to the specific application requirements (see 2.2).

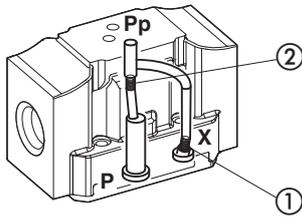

24 FASTENING BOLTS AND SEALS

Type	Size	Fastening bolts	Seals
DPZO	1 = 10	4 socket head screws M6x40 class 12.9 Tightening torque = 15 Nm	5 OR 2050 Diameter of ports A, B, P, T: Ø 11 mm (max) 2 OR 108 Diameter of ports X, Y: Ø = 5 mm (max)
	2 = 16	4 socket head screws M10x50 class 12.9 Tightening torque = 70 Nm 2 socket head screws M6x45 class 12.9 Tightening torque = 15 Nm	4 OR 130 Diameter of ports A, B, P, T: Ø 20 mm (max) 2 OR 2043 Diameter of ports X, Y: Ø = 7 mm (max)
	4 = 25	6 socket head screws M12x60 class 12.9 Tightening torque = 125 Nm	4 OR 4112 Diameter of ports A, B, P, T: Ø 24 mm (max) 2 OR 3056 Diameter of ports X, Y: Ø = 7 mm (max)
	4M = 27	6 socket head screws M12x60 class 12.9 Tightening torque = 125 Nm	4 OR 3137 Diameter of ports A, B, P, T: Ø 32 mm (max) 2 OR 3056 Diameter of ports X, Y: Ø = 7 mm (max)
	6 = 32	6 socket head screws M20x80 class 12.9 Tightening torque = 600 Nm	4 OR 144 Diameter of ports A, B, P, T: Ø 34 mm (max) 2 OR 3056 Diameter of ports X, Y: Ø = 7 mm (max)
	8 = 35	6 socket head screws M20x100 class 12.9 Tightening torque = 600 Nm	4 OR 156 Diameter of ports A, B, P, T: Ø 50 mm (max) 2 OR 3056 Diameter of ports X, Y: Ø = 9 mm (max)

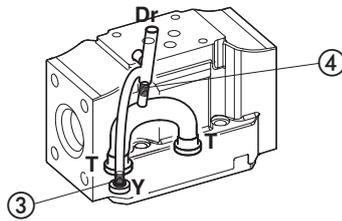

25 PLUGS LOCATION FOR PILOT/DRAIN CHANNELS

Depending on the position of internal plugs, different pilot/drain configurations can be obtained as shown below. To modify the pilot/drain configuration, proper plugs must only be interchanged. The plugs have to be sealed using loctite 270. Standard valves configuration provides internal pilot and external drain.

DPZO-1 Pilot channels

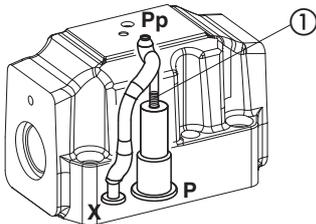

Drain channels

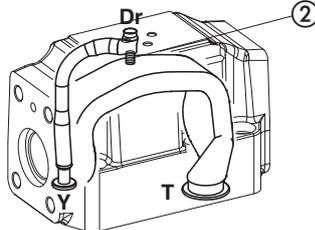

Internal piloting: blinded plug SP-X300F ① in X;
External piloting: blinded plug SP-X300F ② in Pp;
Internal drain: blinded plug SP-X300F ③ in Y;
External drain: blinded plug SP-X300F ④ in Dr.

DPZO-2 Pilot channels

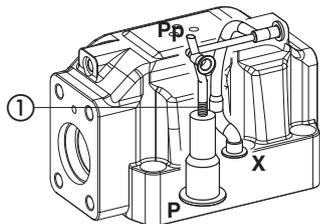

Drain channels

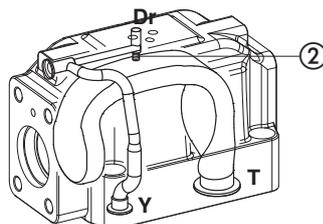

Internal piloting: Without blinded plug SP-X300F ①;
External piloting: Add blinded plug SP-X300F ①;
Internal drain: Without blinded plug SP-X300F ②;
External drain: Add blinded plug SP-X300F ②.

DPZO-4 Pilot channels

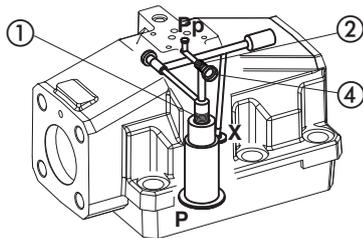

Drain channels

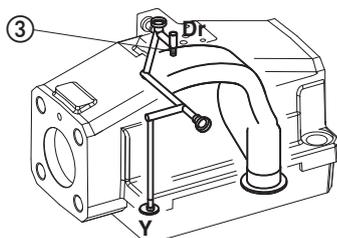

Internal piloting: Without blinded plug SP-X500F ①;
External piloting: Add blinded plug SP-X500F ①;
Internal drain: Without blinded plug SP-X300F ②;
External drain: Add blinded plug SP-X300F ②.

DPZO-6 Pilot channels

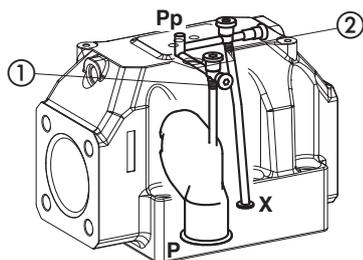

Drain channels

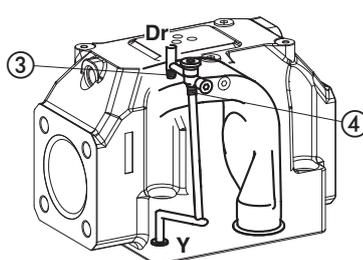

Internal piloting: Without plug ①;
External piloting: Add DIN-908 M16x1,5 in pos ①;
Internal drain: Without blinded plug SP-X300F ③;
External drain: Add blinded plug SP-X300F ③.

DPZO-8 Pilot channels

Drain channels

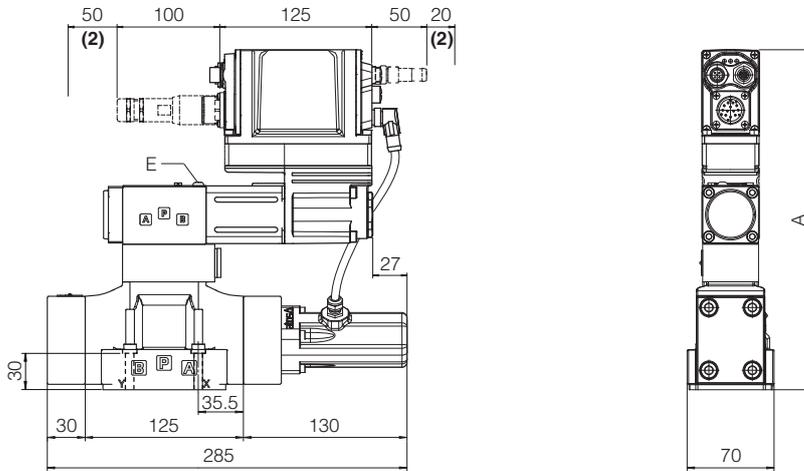

Internal piloting: Without plug ①;
External piloting: Add NPTF 1/8 in pos ①;
 plug NPTF 1/8 in pos ②;
Internal drain: Without plug NPTF 1/8 in pos ③;
 Add plug NPTF 1/8 in pos ④;
External drain: Add plug NPTF 1/8 in pos ③.

DPZO-LEZ-*-1

ISO 4401: 2005

Mounting surface: 4401-05-05-0-05 (see table P005)

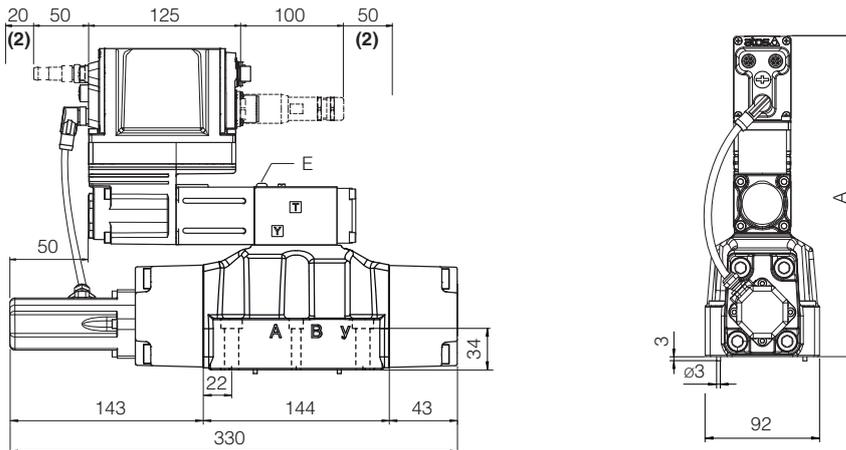

DPZO-*-1	A	E (air bleeding)	Mass [kg]
all versions	271	 3	9,8

(1) The indicated dimension refers to the longer connectors. For dimensions of all connectors, see section 22.6
 (2) Space required for connection cable and for connector removal

DPZO-LEZ-*-2

ISO 4401: 2005

Mounting surface: 4401-07-07-0-05 (see table P005)

DPZO-*-2	A	E (air bleeding)	Mass [kg]
all versions	252	 3	14,4
Option /G	+40	-	+0,9

(1) The indicated dimension refers to the longer connectors. For dimensions of all connectors, see section 22.6
 (2) Space required for connection cable and for connector removal

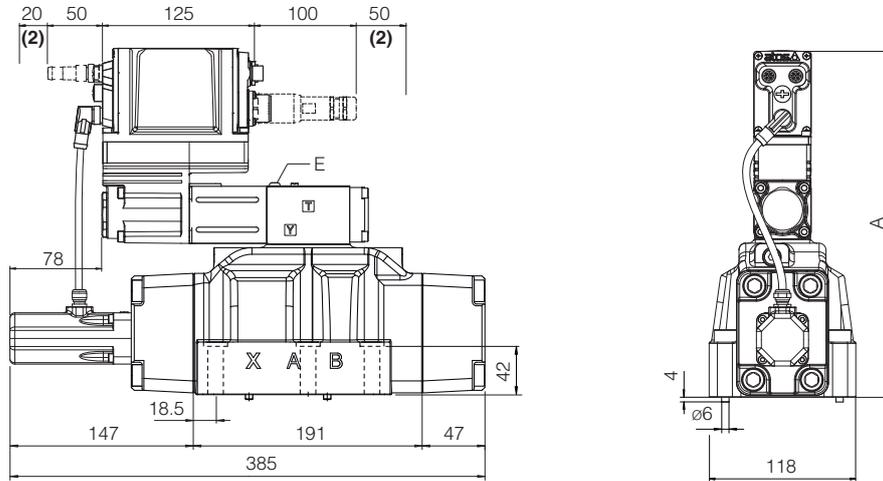

Note: for option /B the proportional solenoid, the LVDT transducer and the on-board digital driver + axis card are at side of port B of the main stage

DPZO-LEZ-*-4

ISO 4401: 2005
 Mounting surface: 4401-08-08-0-05(see table P005)

DPZO-LEZ-*-4M

ISO 4401: 2005
 Mounting surface: 4401-08-08-0-05(see table P005)
 ports A, B, P, T Ø 32mm

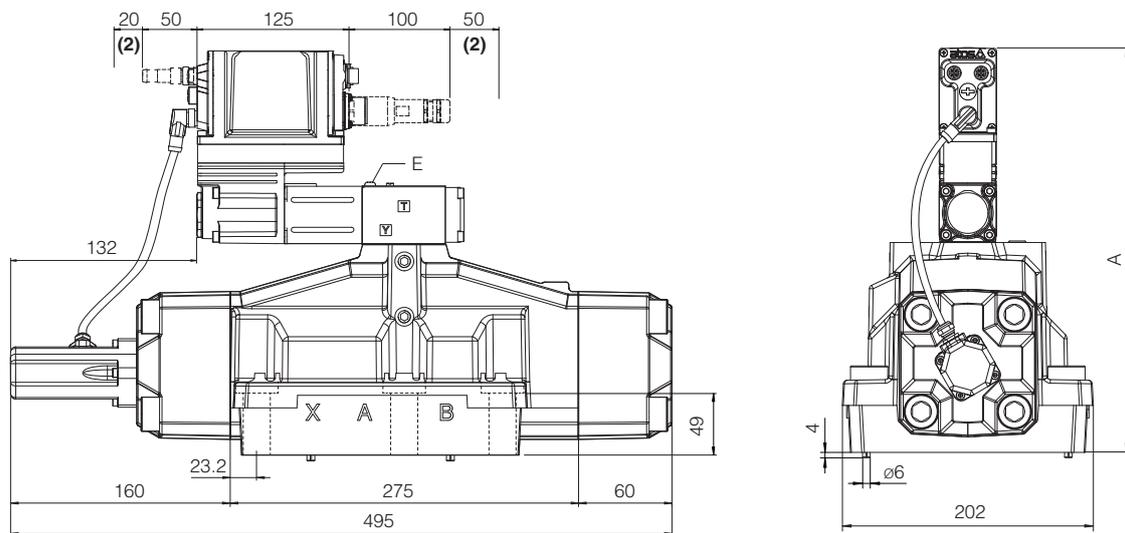

DPZO-*-4 and DPZO-*-4M	A	E (air bleeding)	Mass [kg]
all versions	281	 3	19,4
Option /G	+40	-	+0,9

(1) The indicated dimension refers to the longer connectors. For dimensions of all connectors, see section 22.6
 (2) Space required for connection cable and for connector removal

DPZO-LEZ-*-6

ISO 4401: 2005
 Mounting surface: 4401-10-09-0-05 (see table P005)

DPZO-*-6	A	E (air bleeding)	Mass [kg]
all versions	323	 3	43,4
Option /G	+40	-	+0,9

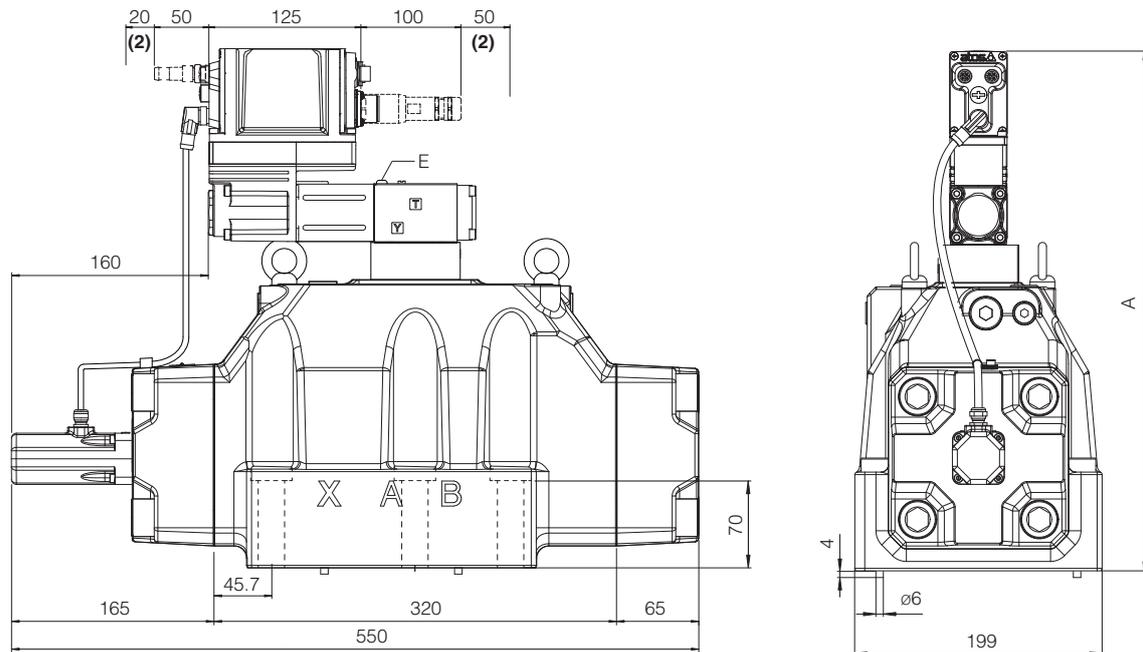

(1) The indicated dimension refers to the longer connectors. For dimensions of all connectors, see section 22.6
 (2) Space required for connection cable and for connector removal

Note: for option /B the proportional solenoid, the LVDT transducer and the on-board digital driver + axis card are at side of port B of the main stage

DPZO-LEZ-*-8

ISO 4401: 2005

Mounting surface: 4401-10-09-0-05 (see table P005)

DPZO-*-8	A	E (air bleeding)	Mass [kg]
all versions	417	 3	80,4
Option /G	+40	-	+0,9

(1) The indicated dimension refers to the longer connectors. For dimensions of all connectors, see section 22.6

(2) Space required for connection cable and for connector removal

Note: for option /B the proportional solenoid, the LVDT transducer and the on-board digital driver + axis card are at side of port B of the main stage
