

# Digital proportional directional valves

piloted, without transducer, with positive spool overlap

## DPZO-A, DPZO-AEB, DPZO-AES

Digital proportional valves without position transducer and with positive spool overlap, for open loop directional controls and not compensated flow regulations.

**A** to be coupled with off-board drivers.

**AEB** basic execution, with on-board digital driver, with analog reference signal or IO-Link interface for digital reference signal, valve settings, and real-time diagnostics.

**AES** full execution, with on-board digital driver which includes also fieldbus interfaces for digital reference signal, valve settings, and real-time diagnostics.

For **AEB** and **AES**, USB port is always present for valve settings via Atos PC software.

Size: **10 ÷ 32** - ISO 4401

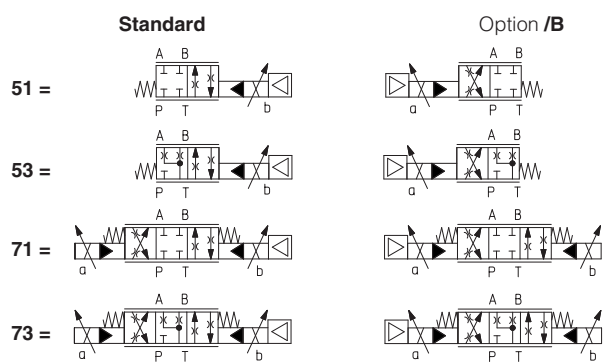

Max flow: **180 ÷ 1500 l/min**

Max pressure: **350 bar**

## 1 MODEL CODE

| DPZO   | - | AES | - | BC | - | 2 | 71 | - | L | 5 | / | * | / | * | * | / | * |
|--|---|-----|---|----|---|---|----|---|---|---|---|---|---|---|---|---|---|
| Proportional directional valve, piloted  |   |     |   |    |   |   |    |   |   |   |   |   |   |   |   |   |   |
| <b>A</b> = off-board driver, see section <a href="#">2</a><br><b>AEB</b> = basic on-board digital driver<br><b>AES</b> = full on-board digital driver  |   |     |   |    |   |   |    |   |   |   |   |   |   |   |   |   |   |

## 3 GENERAL NOTES

Atos digital proportionals valves are CE marked according to the applicable directives (e.g. Immunity and Emission EMC Directive). Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in tech table **FS900** and in the user manuals included in the E-SW-\* programming software.

## 4 VALVE SETTINGS AND PROGRAMMING TOOLS

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB/Bluetooth to the digital driver. For fieldbus/IO-Link versions, the software permits valve's parameterization through USB/Bluetooth also if the driver is connected to the central machine unit via fieldbus/IO-Link.

The software is available in different versions according to the driver's options (see table **GS500**):

**E-SW-BASIC** support: NP (USB) IL (IO-Link) PS (Serial) IR (Infrared)

**E-SW-FIELDBUS** support: BC (CANopen) BP (PROFIBUS DP) EH (EtherCAT)  
EW (POWERLINK) EI (EtherNet/IP) EP (PROFINET)

**E-SW-\*/PQ** support: valves with SP, SF, SL alternated control (e.g. E-SW-BASIC/PQ)

**WARNING: drivers USB port is not isolated!** For E-C-SB-USB/M12 cable, the use of isolator adapter is highly recommended for PC protection

**WARNING:** see tech table **GS500** for the list of countries where the Bluetooth adapter has been approved

### USB or Bluetooth connection

## 5 IO-LINK - only for AEB, see tech. table GS520

IO-Link allows low cost digital communication between the valve and machine central unit. The valve is directly connected to a port of an IO-Link master (point-to-point connection) via low-cost unshielded cables for digital reference, diagnostic and settings. The IO-Link master works as a hub exchanging this information with the machine central unit via fieldbus.

## 6 FIELDBUS - only for AES, see tech. table GS510

Fieldbus allows valve direct communication with machine control unit for digital reference, valve diagnostics and settings. These execution allow to operate the valves through fieldbus or analog signals available on the main connector.

## 7 GENERAL CHARACTERISTICS

|  |   |
|--|---|
| Assembly position                      | Any position  |
| Subplate surface finishing to ISO 4401 | Acceptable roughness index: $R_a \leq 0,8$ , recommended $R_a 0,4$ – Flatness ratio 0,01/100  |
| MTTFd valves according to EN ISO 13849 | 75 years, for further details see technical table P007  |
| Ambient temperature range              | <b>A:</b> Standard = $-20^{\circ}\text{C} \div +70^{\circ}\text{C}$ /PE option = $-20^{\circ}\text{C} \div +70^{\circ}\text{C}$ /BT option = $-40^{\circ}\text{C} \div +60^{\circ}\text{C}$<br><b>AEB, AES:</b> Standard = $-20^{\circ}\text{C} \div +60^{\circ}\text{C}$ /PE option = $-20^{\circ}\text{C} \div +60^{\circ}\text{C}$ /BT option = $-40^{\circ}\text{C} \div +60^{\circ}\text{C}$ |
| Storage temperature range              | <b>A:</b> Standard = $-20^{\circ}\text{C} \div +80^{\circ}\text{C}$ /PE option = $-20^{\circ}\text{C} \div +80^{\circ}\text{C}$ /BT option = $-40^{\circ}\text{C} \div +70^{\circ}\text{C}$<br><b>AEB, AES:</b> Standard = $-20^{\circ}\text{C} \div +70^{\circ}\text{C}$ /PE option = $-20^{\circ}\text{C} \div +70^{\circ}\text{C}$ /BT option = $-40^{\circ}\text{C} \div +70^{\circ}\text{C}$ |
| Surface protection                     | Zinc coating with black passivation, galvanic treatment (driver housing for AEB and AES)  |
| Corrosion resistance                   | Salt spray test (EN ISO 9227) > 200 h   |
| Vibration resistance                   | See technical table G004 (for AEB and AES)  |
| Compliance                             | CE according to EMC directive 2014/30/EU (Immunity: EN 61000-6-2; Emission: EN 61000-6-3)<br>RoHS Directive 2011/65/EU as last update by 2015/863/EU<br>REACH Regulation (EC) n°1907/2006   |

## 8 HYDRAULIC CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

| Valve model                                       | DPZO-*-1   | DPZO-*-2          | DPZO-*-4          | DPZO-*-6  |

# 11 DIAGRAMS (based on mineral oil ISO VG 46 at 50 °C)

## 11.1 Regulation diagrams (values measure at $\Delta p$ 10 bar P-T)

**Note:** Hydraulic configuration vs. reference signal for configuration 71 and 73 (standard and option /B)

Reference signal  $\begin{matrix} 0 \div +10 \text{ V} \\ 12 \div 20 \text{ mA} \end{matrix} \left. \vphantom{\begin{matrix} 0 \div +10 \text{ V} \\ 12 \div 20 \text{ mA} \end{matrix}} \right\} P \rightarrow A / B \rightarrow T$

Reference signal  $\begin{matrix} 0 \div -10 \text{ V} \\ 12 \div 4 \text{ mA} \end{matrix} \left. \vphantom{\begin{matrix} 0 \div -10 \text{ V} \\ 12 \div 4 \text{ mA} \end{matrix}} \right\} P \rightarrow B / A \rightarrow T$

## 11.2 Flow / $\Delta p$ diagram

stated at 100% of spool stroke

### DPZO-1:

1 = spools L5, S5, D5

### DPZO-2:

2 = spools L3, S3, D3

3 = spools L5, S5, D5

### DPZO-4:

4 = spools L5, S5, D5

### DPZO-6:

5 = spools L5, S5, D5

## 11.3 Response time (measured at pilot pressure = 100 bar)

The response times in below diagrams are measured at different steps of the reference input signal. They have to be considered as average values. For the valves with digital electronics the dynamics performances can be optimized by setting the internal software parameters.

## 11.4 Operation as throttle valve

Single solenoid valves (\*51) can be used as simple throttle valves:

$P_{max} = 250$  bar

For this application, the use of valve -TEB or -TES (see tab. FS172) is advisable (consult our technical office)

| DPZO-*              | 151-L5 | 251-L5 | 451-L5 | 651-L5 |
|---------------------|--------|--------|--------|--------|
| Max flow [l/min]    | 320    | 860    | 1600   | 2200   |
| $\Delta p = 15$ bar |        |        |        |        |

## 12 HYDRAULIC OPTIONS

- B** = DPZO-\*-5 = solenoid and on-board digital driver at side B of the main stage (side A of pilot valve).  
DPZO-\*-7 = on-board digital driver at side of port B of the main stage (side A of pilot valve).
- D** = Internal drain.  
Pilot and drain configuration can be modified as shown in section 20.  
The valve's standard configuration provides internal pilot and external drain.
- E** = External pilot (through port X).  
Pilot and drain configuration can be modified as shown in section 20.  
The valve's standard configuration provides internal pilot and external drain.
- G** = Pressure reducing valve installed between pilot valve and main body with fixed setting:  
DPZO-1 and DPZO-2 = **40 bar**  
DPZO-4 and DPZO-6 = **100 bar**  
It is advisable for valves with internal pilot in case of system pressure higher than 150 bar.

## 13 ELECTRONICS OPTIONS - only for AEB and AES

- I** = This option provides 4 ÷ 20 mA current reference and monitor signals, instead of the standard ±10 VDC.  
Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 VDC or ±20 mA.  
It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage.  
Note: **/I** option not available for **AEB-IL**.
- Q** = This option permits to inhibit the valve function without removing the power supply to the driver.  
Upon disable command the current to the solenoid is zeroed and the valve's spool moves to rest position.  
The option **/Q** is suggested for all cases where the valve has to be frequently inhibited during the machine cycle – see 16.5 for signal specifications.  
Note: **/Q** option not available for **AEB-IL**.
- Z** = This option provides, on the 12 pin main connector, the following additional features:  
**Fault output signal** - see 16.6  
**Enable input signal** - see above option **/Q**  
**Power supply for driver's logics and communication** - see 16.2  
Note: **/Z** option not available for **AEB-IL**.
- C** = Only in combination with option **/W**  
This option is available to connect pressure transducers with 4 ÷ 20 mA current output signal, instead of the standard ±10 VDC.  
Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 VDC or ±20 mA.
- W** = Only for valves coupled with pressure compensator, see tech table **D150**.  
It provides the hydraulic power limitation function. The driver receives the flow reference signal by the analog input INPUT+ and a pressure transducer, installed in the hydraulic system, has to be connected to the driver's analog input TR. When the actual requested hydraulic power **p x Q** (TR x INPUT+) reaches the max power limit (**p1 x Q1**), internally set by software, the driver automatically reduces the flow regulation of the valve. The higher is the pressure feedback the lower is the valve's regulated flow:

$$\text{Flow regulation} = \text{Min} \left( \frac{\text{PowerLimit [sw setting]}}{\text{Transducer Pressure [TR]}} ; \text{Flow Reference [INPUT+]} \right)$$

Notes: for **AEB-IL** the drive receives the flow reference signal directly by IO-Link interface  
for **AES** the drive can receive the flow reference signal directly by fieldbus interface

## Functional Scheme

Example of configuration 7\*  
3 positions, spring centered

- ① Pilot valve  
② Main stage  
③ Pressure reducing valve  
④ Plug to be added for external pilot trough port X  
⑤ Plug to be removed for internal drain through port T

## Hydraulic Power Limitation

only for option **/W**

## 14 POSSIBLE COMBINED OPTIONS

For **AEB-NP** and **AES**

**Hydraulic options:** /BY

**Electronics options:** /IQ, /IZ, /IW, /CW, /CWI

For **AEB-IL**

**Hydraulic options:** /BY

**Electronics options:** /CW

## 15 COIL VOLTAGE OPTIONS - only for A

**6** = Optional coil to be used with Atos drivers with power supply 12 VDC.

**18** = Optional coil to be used with electronic drivers not supplied by Atos, with power supply 24 VDC and with max current limited to 1A.

## 16 POWER SUPPLY AND SIGNALS SPECIFICATIONS - only for AEB and AES

Generic electrical output signals of the valve (e.g. fault or monitor signals) must not be directly used to activate safety functions, like to switch-ON/OFF the machine's safety components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, ISO 4413).

For AEB-IL see section 17 for IO-Link signals specifications and see 16.7 for pressure transducer signal for /W option.

### 16.1 Power supply (V+ and V0)

The power supply must be appropriately stabilized or rectified and filtered: apply at least a 10000  $\mu$ F/40 V capacitance to single phase rectifiers or a 4700  $\mu$ F/40 V capacitance to three phase rectifiers. In case of separate power supply see 16.2.

A safety fuse is required in series to each power supply: 2,5 A time lag fuse.

### 16.2 Power supply for driver's logic and communication (VL+ and VL0) - only for /Z and /W options

The power supply for driver's logic and communication must be appropriately stabilized or rectified and filtered: apply at least a 10000  $\mu$ F/40 V capacitance to single phase rectifiers or a 4700  $\mu$ F/40 V capacitance to three phase rectifiers.

The separate power supply for driver's logic on pin 9 and 10, allow to remove solenoid power supply from pin 1 and 2 maintaining active the diagnostics, USB and fieldbus communications.

A safety fuse is required in series to each driver's logic and communication power supply: 500 mA fast fuse.

### 16.3 Reference input signal (INPUT+)

The driver controls in closed loop the current to the valve proportionally to the external reference input signal.

Reference input signal is factory preset according to selected valve code, defaults are  $\pm 10$  Vdc for standard and  $4 \div 20$  mA for /I option.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of  $\pm 10$  Vdc or  $\pm 20$  mA.

Drivers with fieldbus interface (BC, BP, EH) can be software set to receive reference signal directly from the machine control unit (fieldbus reference). Analog reference input signal can be used as on-off commands with input range  $0 \div 24$  Vdc.

### 16.4 Monitor output signals (MONITOR and MONITOR2)

The driver generates an analog output signal (MONITOR) proportional to the actual coil current of the valve; the monitor output signal can be software set to show other signals available in the driver (e.g. analog reference, fieldbus reference).

Monitor output signal is factory preset according to selected valve code, default settings is  $\pm 5$  Vdc ( $1V = 1A$ ).

Output signal can be reconfigured via software, within a maximum range of  $\pm 5$  Vdc.

#### Option /W

The driver generates a second analog output signal (MONITOR2) proportional to the actual system pressure.

The output maximum range is  $\pm 5$  Vdc; default setting is  $0 \div 5$  Vdc.

### 16.5 Enable input signal (ENABLE) - not for standard

To enable the driver, supply a 24 Vdc on pin 3 (pin C): Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to active the communication and the other driver functions when the valve must be disabled for safety reasons. This condition **does not comply** with norms IEC 61508 and ISO 13849.

Enable input signal can be used as generic digital input by software selection.

### 16.6 Fault output signal (FAULT) - only for /Z and /W options

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal broken for  $4 \div 20$  mA input, etc.).

Fault presence corresponds to 0 Vdc, normal working corresponds to 24 Vdc.

Fault status is not affected by the Enable input signal.

### 16.7 Remote pressure transducer input signal (TR) - only for /W option

Analog pressure transducers can be directly connected to the driver (see 18.5).

Analog input signal is factory preset according to selected driver code, defaults are  $0 \div 10$  Vdc for standard and  $4 \div 20$  mA for /C option.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of  $\pm 10$  Vdc or  $\pm 20$  mA.

Note: transducer feedback can be read as a digital information through fieldbus and IO-Link communication - software selectable.

## 17 IO-LINK SIGNALS SPECIFICATIONS - only for AEB-IL

### 17.1 Power supply for IO-Link communication (L+ and L-)

The IO-Link master provides dedicated 24 Vdc power supply for IO-Link communication.

Maximum power consumption: 2 W

Internal electrical isolation of power L+, L- from P24, N24

### 17.2 Power supply for driver's logic and valve regulation (P24 and N24)

The IO-Link master provides dedicated 24 Vdc power supply for valve regulation, logics and diagnostics.

Maximum power consumption: 50 W

Internal electrical isolation of power P24, N24 from L+, L-

### 17.3 IO-Link data line (C/Q)

C/Q signal is used to establish communication between IO-Link master and valve.

## 18 ELECTRONIC CONNECTIONS

### 18.1 Main connector signals - 7 pin (A1) Standard and /Q option - for AEB-NP and AES

| PIN | Standard                          | /Q     | TECHNICAL SPECIFICATIONS  | NOTES  |
|-----|-----------------------------------|--------|---|--|
| A   | V+                                |        | Power supply 24 Vdc   | Input - power supply                                 |
| B   | V0                                |        | Power supply 0 Vdc  | Gnd - power supply                                   |

## 20 PLUGS LOCATION FOR PILOT/DRAIN CHANNELS

Depending on the position of internal plugs, different pilot/drain configurations can be obtained as shown below.  
To modify the pilot/drain configuration, proper plugs must only be interchanged. The plugs have to be sealed using loctite 270.  
Standard valves configuration provides internal pilot and external drain
